A CRM APPLICATION FOR THECHAISHOP&CO

User Story:

As a sales representative at TheChaiShop&Co, I want to efficiently manage customer details and streamline sales activities using the CRM application.

I want to maintain customer records and differentiate online and offline customers using record types for better customer management.

The application should automate order quantity and total bill calculations to ensure accurate transactions.

I also need reports and dashboards to analyze sales data and support better decision-making.

Finally, the system should automatically send birthday emails with special offers to improve customer engagement and loyalty.

1. INTRODUCTION

1.1 Project Overview :

The project **"A CRM Application for TheChaiShop&Co"** focuses on developing a Salesforce-based Customer Relationship Management (CRM) system to efficiently manage customer, employee, and enterprise account information. The system streamlines sales activities, maintains customer records, automates calculations, generates reports and dashboards, and improves customer engagement through automated email notifications.

The project user story and objectives are presented in the initial section of the document.

1.2 Purpose :

The purpose of this project is to:

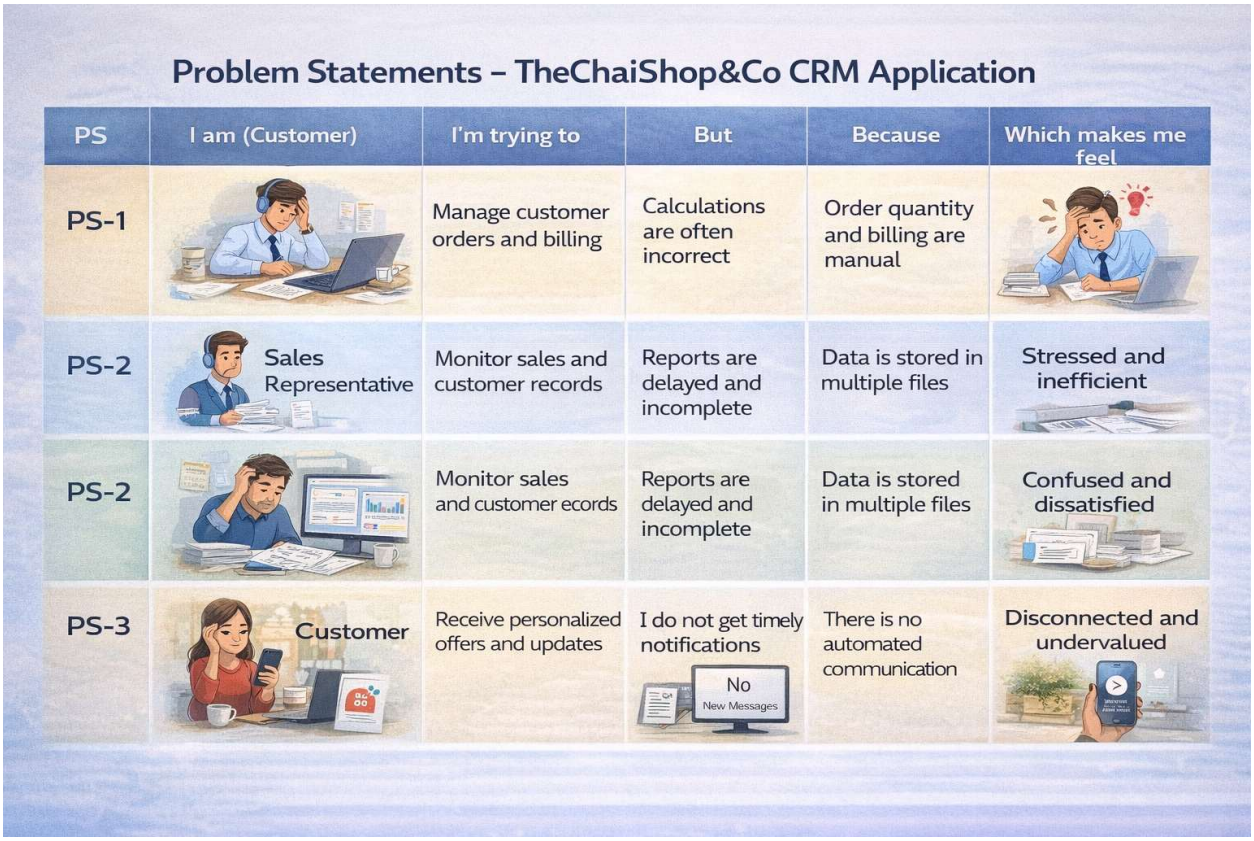

- Streamline customer and account management
- Automate sales, billing, and order calculations
- Maintain accurate and reliable data
- Support effective decision-making through reports and dashboards
- Improve customer engagement using automated email notifications

2. IDEATION PHASE

2.1 Problem Statement (Customer Problem Statement Template)

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Sales Representative	Manage customer orders and process billing efficientl	calculations may lead to errors	Order quantities and billing amounts are calculated manually	Stressed and less productive
PS-2	Store Manager	Track sales activities and customer information	Sales reports are not available quickly	Customer and sales data is maintained across different files	Confused and dissatisfied
PS-3	Customer	Receive relevant offers and timely	Notifications are often delayed or missed	Customer communication is not automated	Disconnected and less valued

		updates			

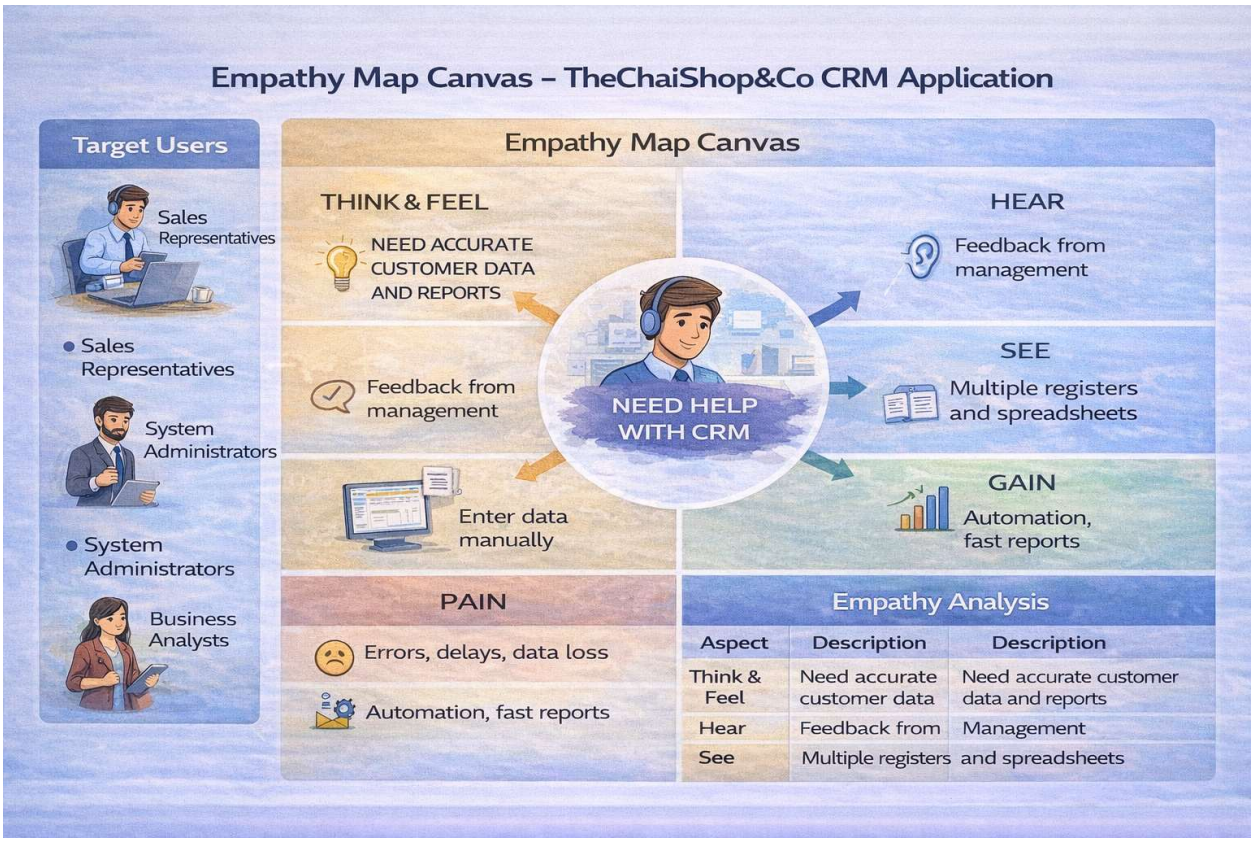

2.2 Empathy Map Canvas

Target Users

- Sales Representatives
- Store Managers
- System Administrators
- Business Analysts

Empathy Analysis

Aspect	Description
Think & Feel	Need reliable customer information and accurate reports
Hear	Suggestions and feedback from managers
See	Different spreadsheets, registers, and records
Say & Do	Enter and update customer and sales details manually
Pain	Data errors, delays, and risk of information loss
Gain	Automated processes, quick access to data, and faster reports

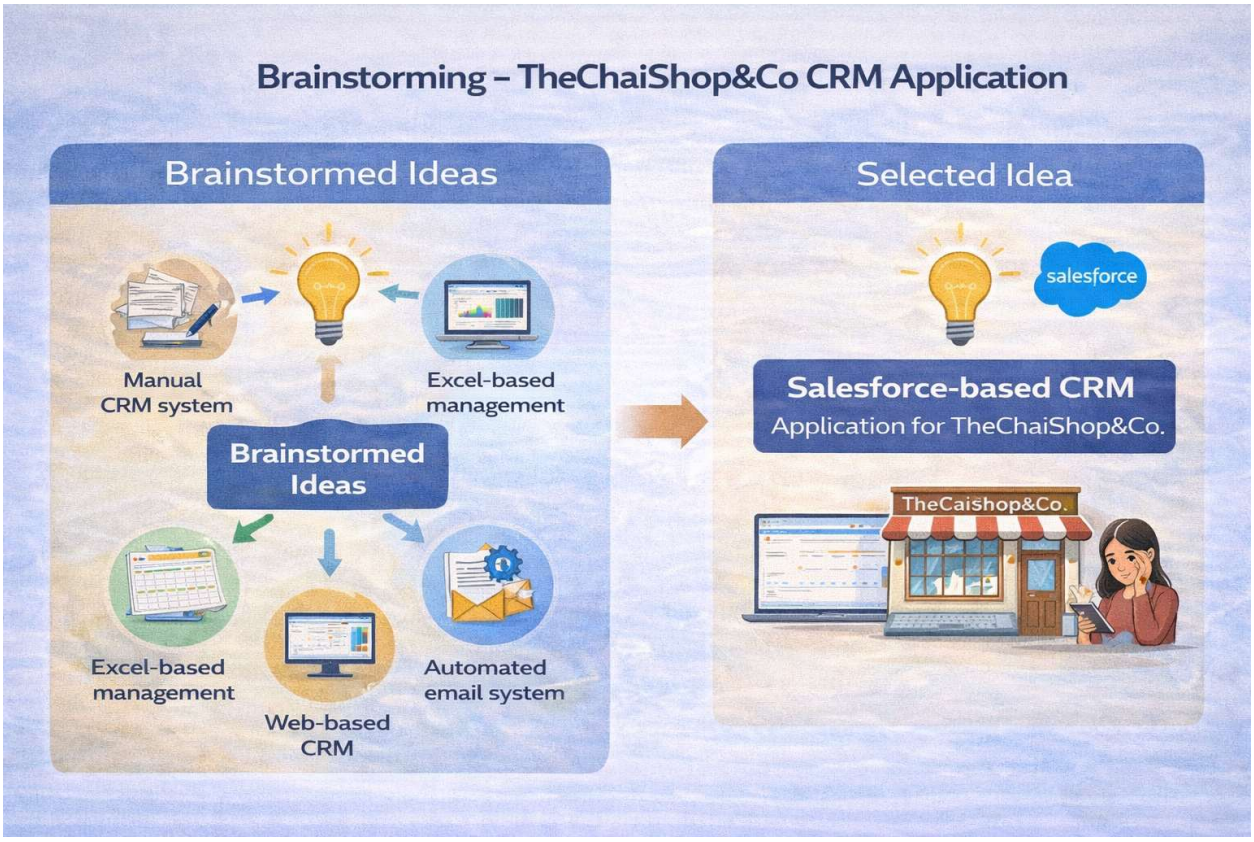

2.3 Brainstorming

Brainstormed Ideas

- Manual customer management system
- Spreadsheet-based management
- Web-based CRM solution
- Salesforce-based CRM application
- Automated customer email notification system

Selected Idea:

Salesforce-based CRM Application for TheChaiShop&Co..

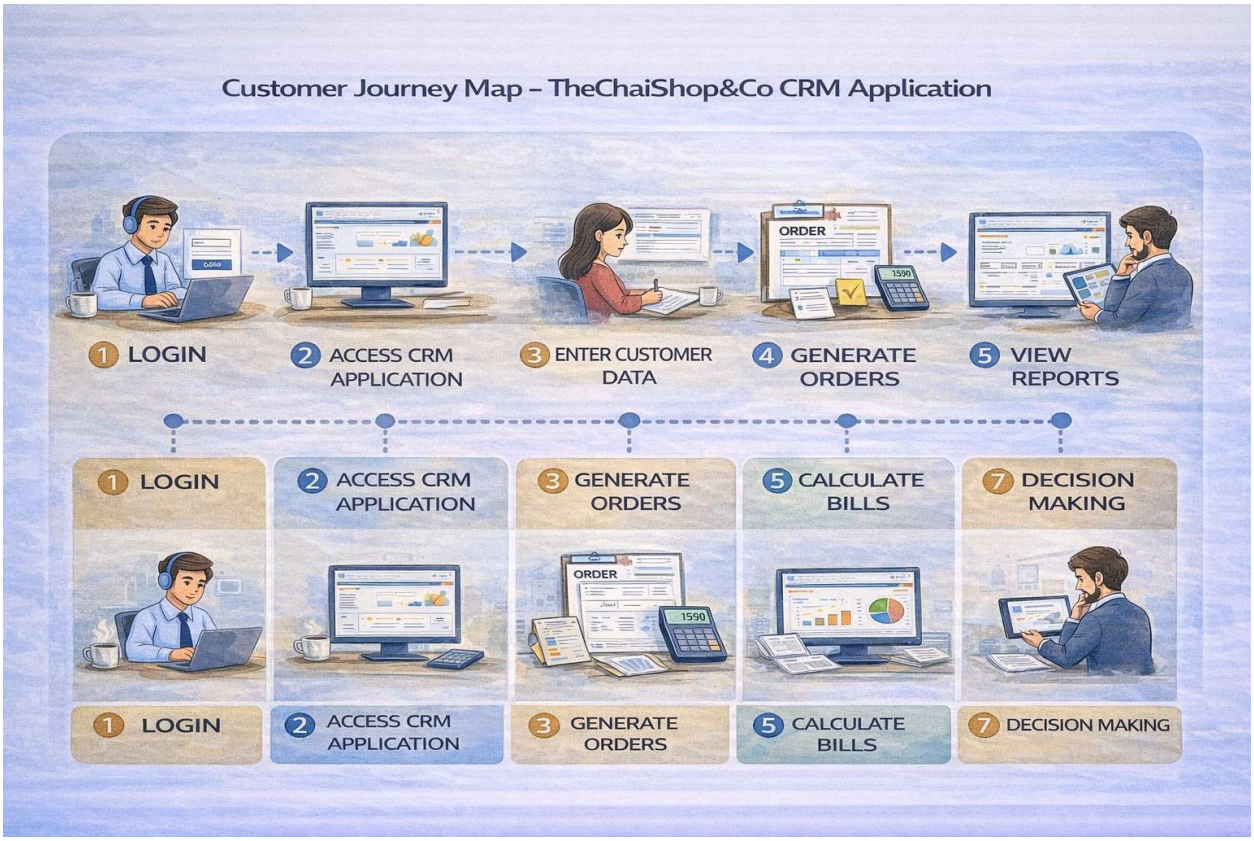

3.REQUIREMENT ANALYSIS PHASE

3.1 Customer Journey Map

Journey Stages:

- Login to the system
- Access the CRM application
- Enter and update customer information
- Create and manage orders
- Calculate order totals and bills
- View reports and dashboards
- Analyze data for decision-making

3.2 Solution Requirements

Functional Requirements

FR No	Requirement
FR-1	User Authentication and Login
FR-2	CRM Object Creation
FR-3	Customer and Sales Data Entry
FR-4	Automated Billing and Calculations
FR-5	Reports and Dashboard Generation
FR-6	Automated Email Notifications

Non-Functional Requirements

NFR-1: Usability

The system should provide a simple and user-friendly experience for sales representatives, managers, administrators, and analysts, with minimal technical knowledge required.

Requirements:

- Simple and intuitive interface
- Clear and organized navigation
- Easy-to-use data entry forms
- User-friendly dashboards and reports

Example:

A new sales representative should be able to log in, enter customer information, create an order, and view the required details without assistance.

Salesforce Lightning provides an intuitive interface with easy navigation and configurable components.

NFR-2: Security

The system should safeguard customer and business information by restricting access to authorized users and protecting sensitive data.

Requirements:

- Role-based access control
- Secure login authentication
- Encrypted data storage
- Data backup and recovery

Examples:

- Profiles and permission sets
- Object-level and field-level security
- Restricted billing access
- Secure login and password policies

NFR-3: Reliability

The CRM system should operate reliably and maintain accurate data without unexpected loss or corruption.

Requirements:

- Automatic data saving and synchronization
- Regular data backups
- Effective error handling
- Reliable cloud-based environment

Example:

If a user enters customer or order information and temporarily loses the internet connection, the system should prevent data loss and retain the information when connectivity is restored.

Salesforce provides cloud-based data storage and backup capabilities to support reliable data management.

NFR-4: Performance

The system should provide quick responses and efficiently handle customer, order, and sales data, even when the volume of records increases.

Requirements:

- Fast page and data loading
- Quick report generation
- Smooth dashboard performance
- Minimal response delay

Example:

When a manager generates a monthly sales report containing a large number of customer records, the report should be displayed within a few seconds.

Efficient data processing and optimized Salesforce features help improve system performance.

NFR-5: Availability

The system should remain accessible to authorized users whenever it is required.

Requirements:

- High system availability
- Minimal service downtime
- Reliable cloud-based infrastructure
- Data recovery support

Example:

Managers should be able to access customer and sales information during regular working hours and other required periods.

Salesforce cloud infrastructure supports reliable system availability.

NFR-6: Scalability

The system should be capable of supporting business growth without significantly affecting its performance.

Requirements:

- Support for additional users
- Ability to manage increasing customer records
- Expandable data storage
- Support for additional CRM features

- Maintain consistent system performance

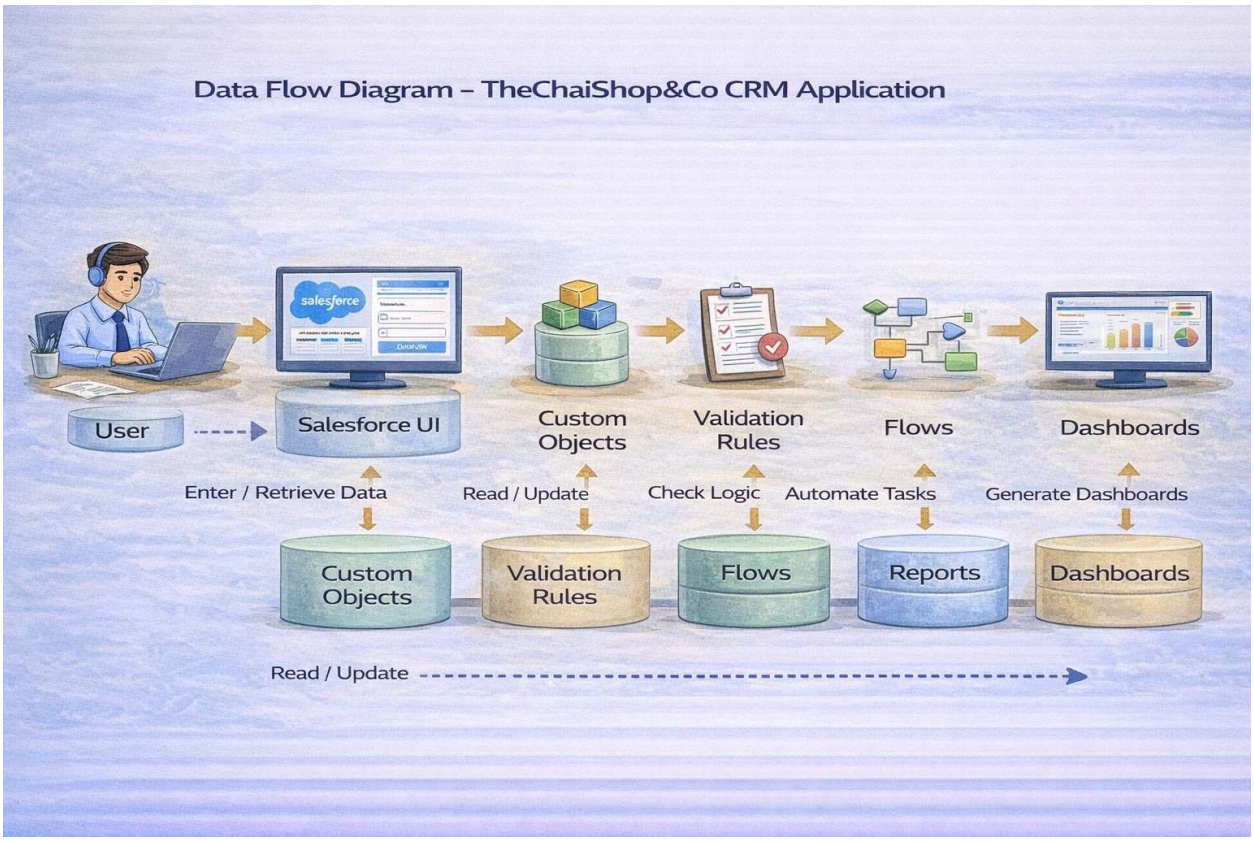

Example:

If TheChaiShop&Co expands its operations to multiple branches, the CRM system should be able to manage a growing number of customers and transactions without significant performance issues.

Salesforce cloud infrastructure provides scalability to support increasing business requirements.

3.3 Data Flow Diagram

User → Salesforce Interface → CRM Objects → Validation Rules → Automation Flows → Reports → Dashboards

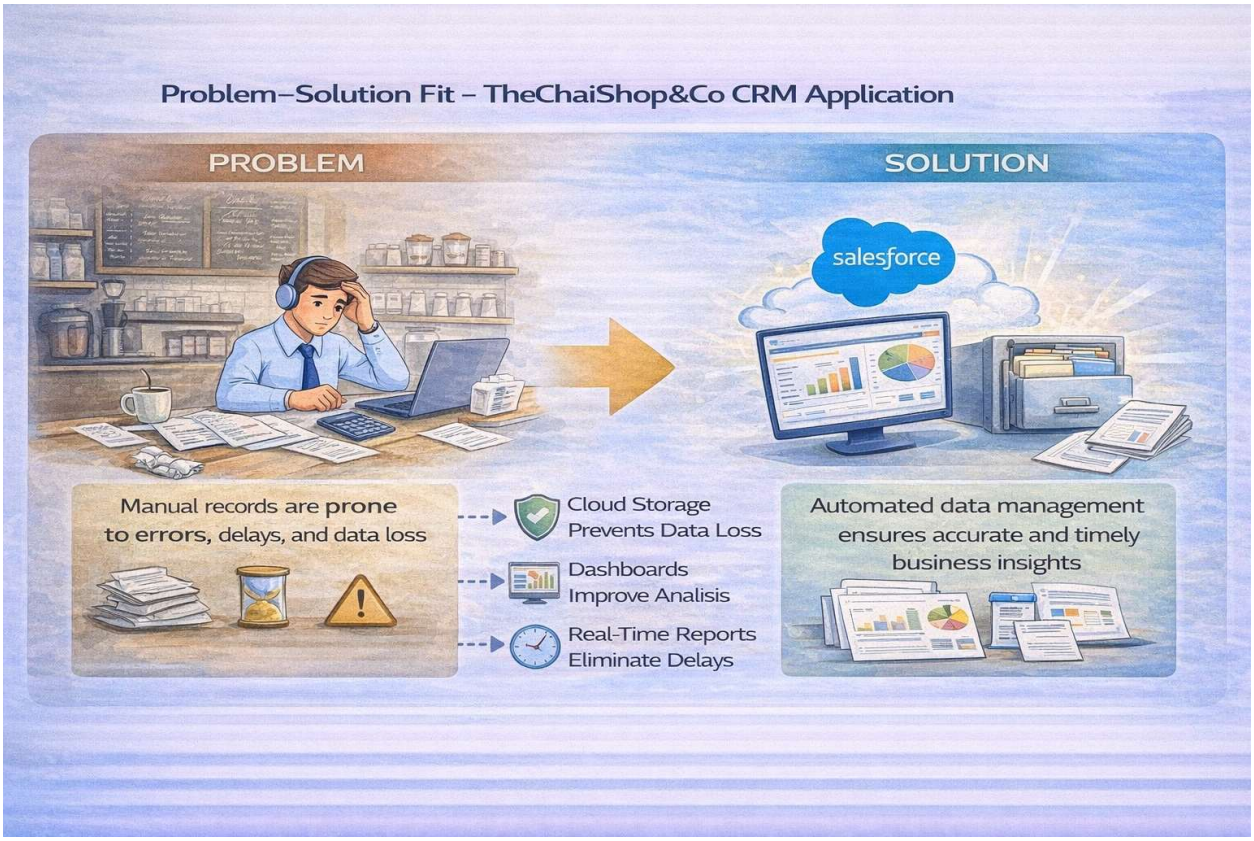

3.4 Technology Stack

Layer	**Technology**
Frontend	Salesforce Lightning Experience
Database	Salesforce Cloud Database
Automation	Salesforce Flows
Backend	Salesforce Platform
Analytics	Reports and Dashboards

4. PROJECT DESIGN PHASE

4.1 Problem–Solution Fit

The CRM system addresses the challenges of manual customer and sales management by providing centralized and automated data handling. Cloud-based storage improves data reliability, while dashboards and real-time reports provide quick access to useful business information. This helps the organization maintain accurate records and make timely decisions.

4.2 Proposed Solution

Functional Requirements

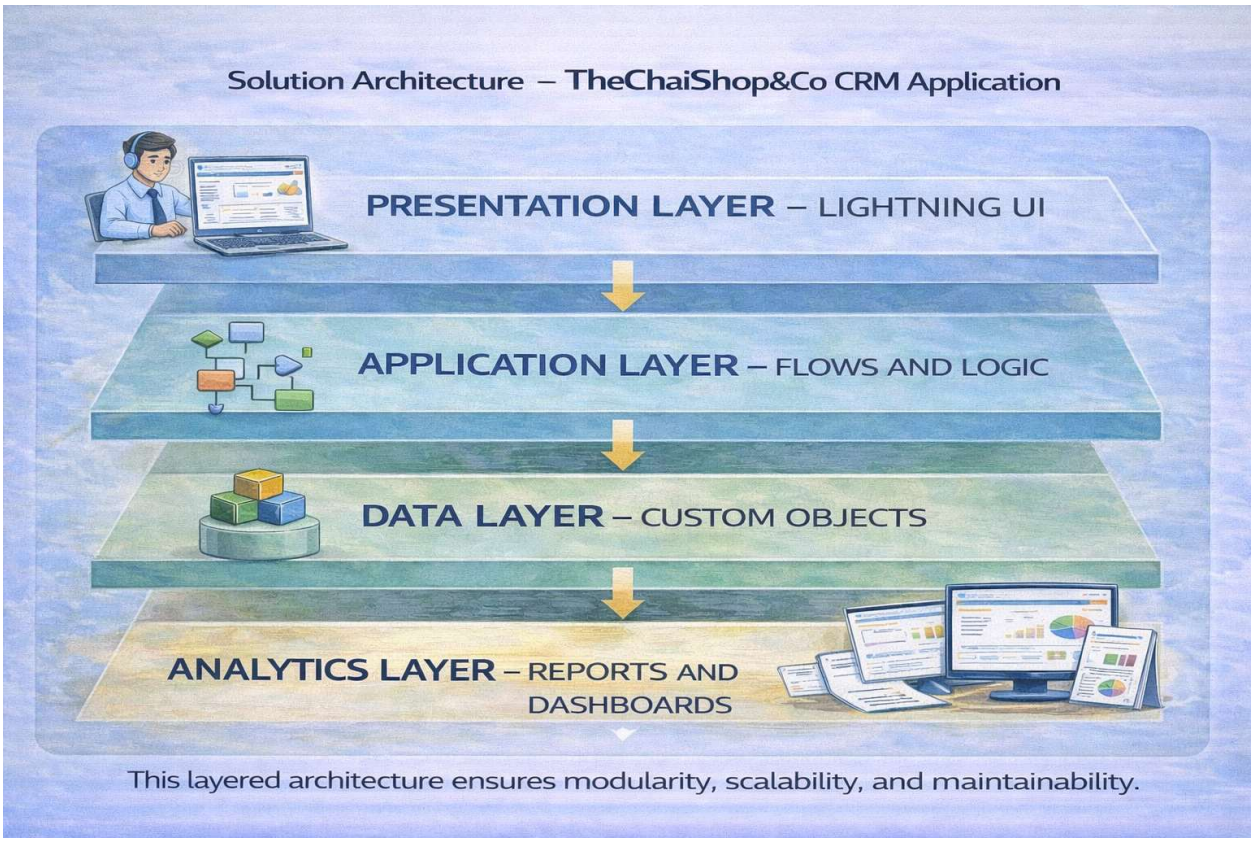

Parameter	Description
User Login & Authentication	Enables authorized users to access the CRM system securely using valid login credentials.
Customer Record Management	Allows users to create, view, edit, and manage customer information such as name, contact details, and address.
Employer & Enterprise Management	Supports maintaining employer and enterprise account information required for business activities.
Order Management	Enables users to create, manage, and track customer orders with relevant quantity and product information.
Automated Billing System	Calculates the total bill automatically based on order quantity and product pricing.
Validation Rules	Validates important fields to ensure that accurate and valid information is entered into the system.
Record Types & Page Layouts	Provides suitable record types and page layouts for different customer and account categories.
Global Picklists	Provides standardized field values for details such as product type, category, and status.
Email Notification System	Sends automated emails for customer birthdays, special offers, and order-related notifications.
Workflow & Flow Automation	Automates record updates, notifications, and other business processes using Salesforce Flows.
Report Generation	Generates reports to analyze customer, sales, order, and business performance data.
Dashboard Visualization	Presents important business information through interactive dashboards and charts.
Data Backup & Recovery	Supports secure storage and recovery of business information using Salesforce cloud services.
User Role Management	Manages user access and permissions through profiles and permission settings based on user roles.

4.3 Solution Architecture

Architecture Layers

1. **Presentation Layer –** Salesforce Lightning Interface
2. **Application Layer –** Salesforce Flows and Business Logic
3. **Data Layer –** Custom and Standard Objects
4. **Analytics Layer –** Reports and Dashboards

This layered architecture provides a structured approach that supports scalability, easy maintenance, and efficient system management.

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

- The project was developed using an Agile-based approach with planned milestones and development stages.
- A Salesforce Developer account was created to provide the required development environment.
- Custom objects were configured to manage customer, employer, and enterprise information.
- Custom tabs and a Lightning application were created to simplify navigation.
- Required fields, relationships, and picklists were configured to maintain consistent data.
- Page layouts and record types were designed according to different user and customer categories.
- Validation rules were added to improve data accuracy and prevent invalid entries.
- Email templates and automated flows were configured for customer notifications.
- Reports and dashboards were developed to monitor and analyze business activities.
- Regular testing and progress reviews were carried out to identify and resolve issues.
- The project activities were completed according to the planned schedule through systematic development and monitoring.

Product Backlog, Sprint Schedule, and Estimation (4 Marks)

Use the below template to create product backlog and sprint schedule

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Developer Setup	USN-1	As an admin, I want to create a Salesforce Developer account to set up the CRM application.	1	High	Member1
Sprint-1	Data Modeling	USN-2	As an admin, I want to create Customer, Employer, and Enterprise objects to manage business data.	3	High	Member2

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-2	Data Modeling	USN-3	As a user, I want separate tabs for each object to access records easily.	3	High	Member3
Sprint-2	Data Modeling	USN-4	As a manager, I want a Lightning App to access CRM functions in one place.	3	High	Member4
Sprint-2	Data Modeling	USN-5	As an admin, I want customer and order fields to record sales and billing details.	5	Medium	Member1
Sprint-2	Data Modeling	USN-6	As a user, I want customized page layouts to display relevant information.	5	High	Member2
Sprint-2	Data Modeling	USN-7	As a manager, I want separate Retail and Enterprise record types to manage customers.	5	Medium	Member3
Sprint-3	Automation	USN-8	As a system, I want to validate customer and order data to prevent errors.	3	High	Member4
Sprint-3	Automation	USN-9	As a system, I want automated email flows to send customer updates and offers.	5	High	Member1
Sprint-4	Automation	USN-10	As a system, I want automatic billing calculations to generate invoices easily.	5	High	Member2
Sprint-5	Reports	USN-11	As a manager, I want sales and customer reports to monitor performance.	4	High	Member3
Sprint-6	Dashboards	USN-12	As a manager, I want dashboards to analyze sales, customer, and enterprise data.	4	Medium	Member4

Project Tracker, Velocity & Burndown Chart: (4 Marks)

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	6 Days	24 Aug 2026	29 Aug 2026	20	29 Aug 2026

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-2	20	6 Days	31 Aug 2026	05 Sep 2026	20	05 Sep 2026
Sprint-3	20	6 Days	07 Sep 2026	12 Sep 2026	20	12 Sep 2026
Sprint-4	20	6 Days	14 Sep 2026	19 Sep 2026	20	19 Sep 2026

6. Project Development Phase:

Project Flow

Milestone 1: Salesforce Developer Account Setup

Milestone 2: Object Creation

Milestone 3: Tab Creation

Milestone 4: Lightning App Creation

Milestone 5: Global Picklist Configuration

Milestone 6: Fields and Relationships

Milestone 7: Page Layout Creation

Milestone 8: Record Type Creation

Milestone 9: Validation Rule Configuration

Milestone 10: Email Template Creation

Milestone 11: Flow Automation

Milestone 12: Reports and Dashboards

Milestone 13: Conclusion

What You'll Learn

1. Real-Time Salesforce Project
2. Standard and Custom Objects
3. Picklist Value Sets
4. Types of Fields and Their Relationships
5. Page Layouts
6. Record Types
7. Validation Rules
8. Email Templates
9. Salesforce Flows
10. Reports and Dashboards

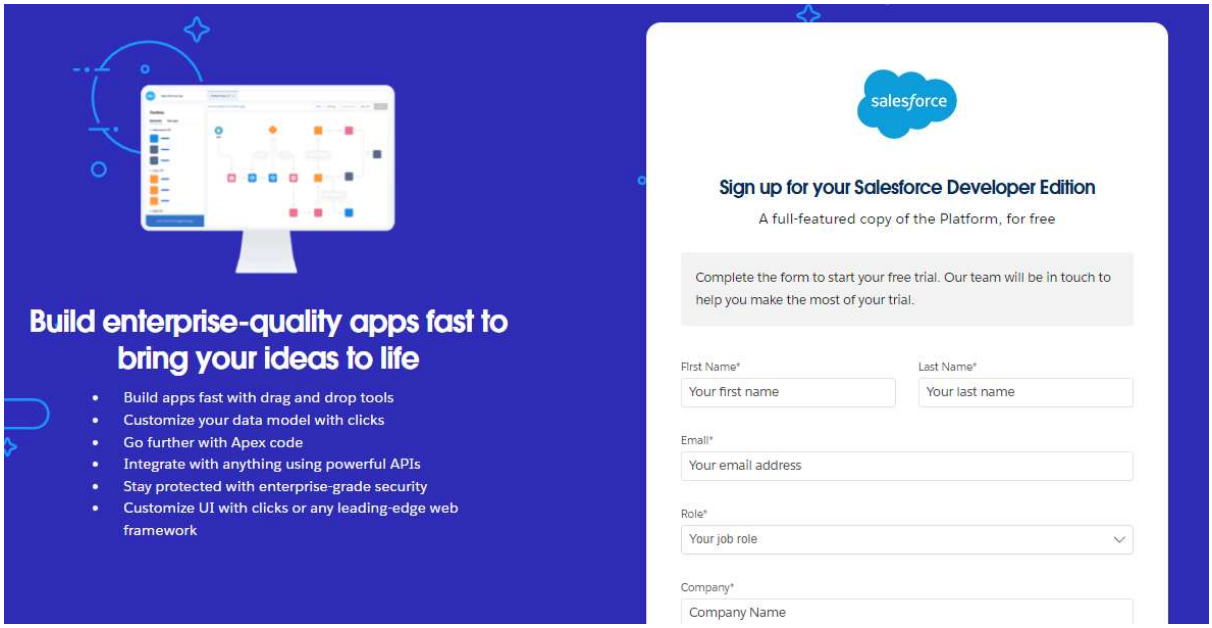

Implementation

Milestone 1 – Salesforce Developer Account Creation

Activity 1: Creating Developer Account:

Creating a developer org in salesforce.

1. Go to https://developer.salesforce.com/signup
2. On the sign up form, enter the following details :

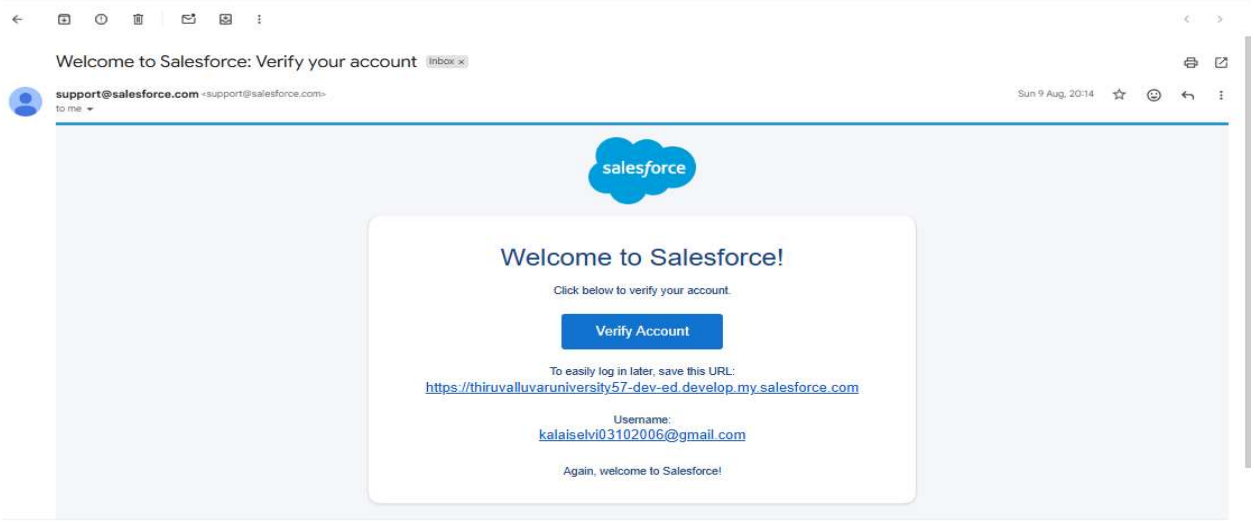

1) First name & Last name
2) Email
3) Role : Developer
4) Company : College or Company Name
5) County : India
6) Postal Code : pin code
7) Username : should be a combination of your name and company

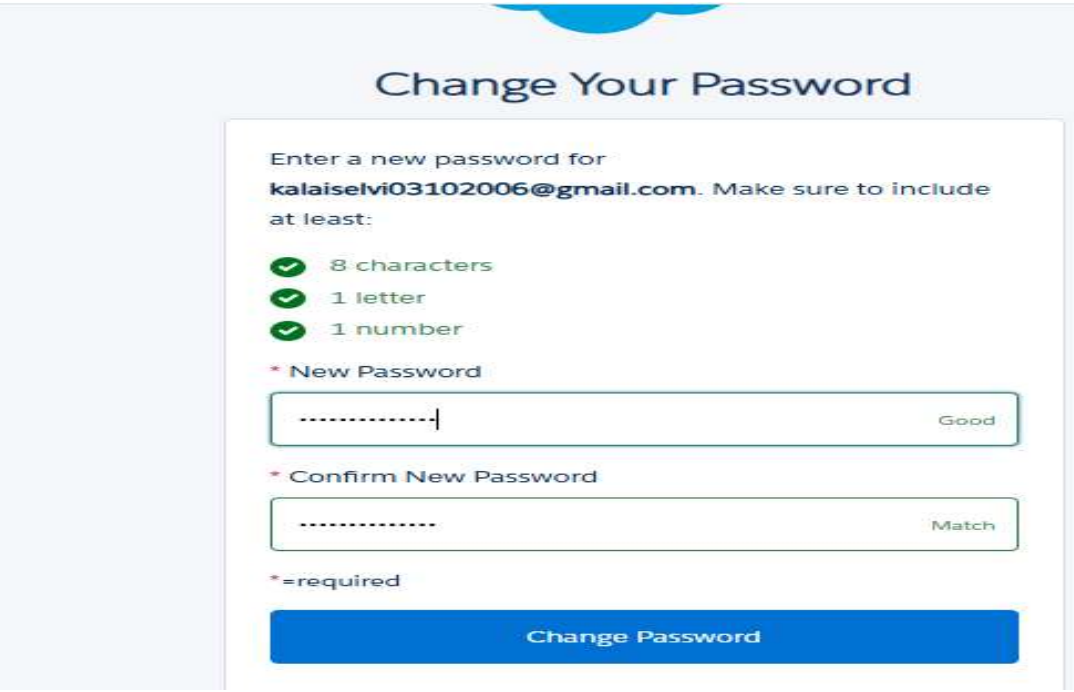

This need not be an actual email id, you can give anything in that format : username@organization.com
Click on sign me up after filling these.

Activity 2: Account Activation :

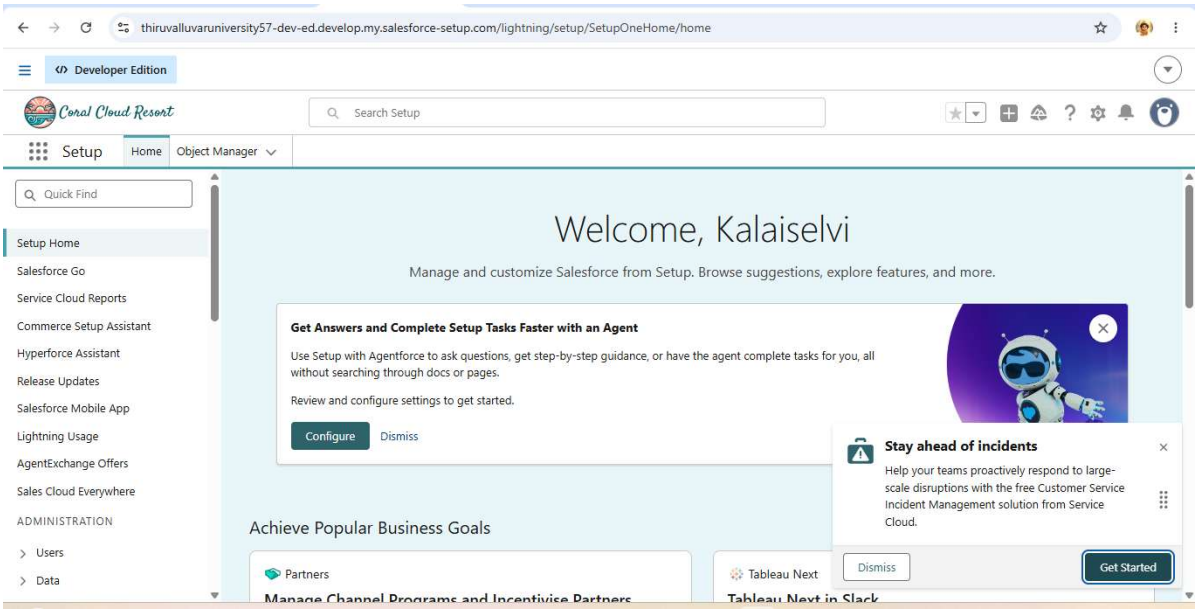

1. Go to the inbox of the email that you used while signing up. Click on the verify account to activate your account. The email may take 5-10mins.

2. Click on Verify Account.
3. Give a password and answer a security question and click on change password.

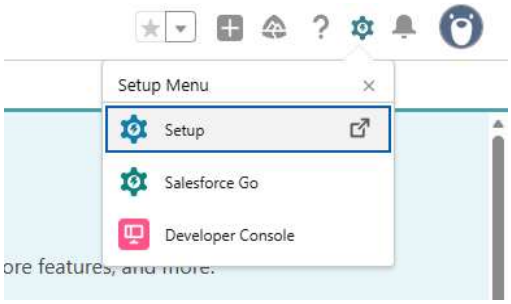

4. Then you will redirect to your salesforce setup page.

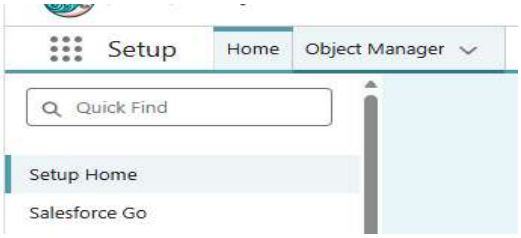

Milestone 2 - Objects

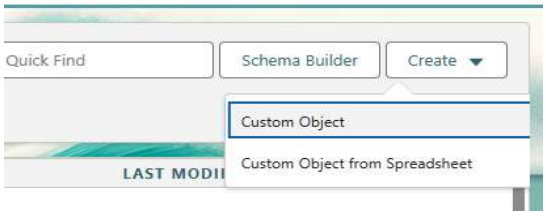

1. In your Salesforce org, click gear icon on the top left and select Setup to open Setup.

2. Click the Object Manager tab. If you don't see it, enter Object Manager in the Quick Find box.

3. On the Object Manager page, click Create | Custom Object.

Activity 1 : Employer Account Object

1. From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.
    - **Label** : Employer Account
    - **Plural Label** : Employer Accounts
    - Enter Record Name Label and Format
        Record Name : Employer Account Name
        Data Type **:** Text
    - **In Optional features :** check the boxes for Allow Reports | Allow Activities | Track Field History.
    - **Search Status :** check the box for Allow Search.
    - Save

Activity 2 : Customer Account Object

1. From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.
    - **Label** : Customer Account
    - **Plural Label** : Customer Accounts
    - Enter Record Name Label and Format
        Record Name : Customer Account Name
        Data Type **:** Text
    - **In Optional features :** check the boxes for Allow Reports | Allow Activities | Track Field History.
    - **Search Status :** check the box for Allow Search.
    - Save

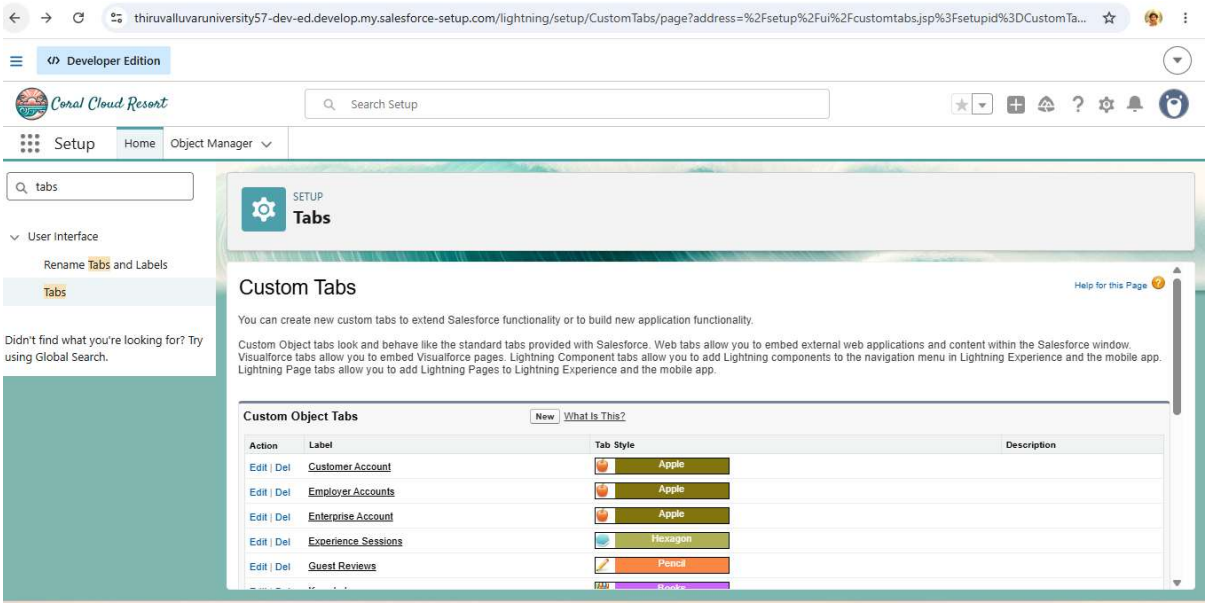

Activity 3 : Enterprise Account Object

1. From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.
    - **Label** : Enterprise Account
    - **Plural Label** : Enterprise Accounts
    - Enter Record Name Label and Format
        Record Name : Enterprise Account Name
        Data Type **:** Text
    - **In Optional features :** check the boxes for Allow Reports | Allow Activities | Track Field History.
    - **Search Status :** check the box for Allow Search.
    - Save

Milestone 3 - Tabs

Activity 1 : Custom tabs creation

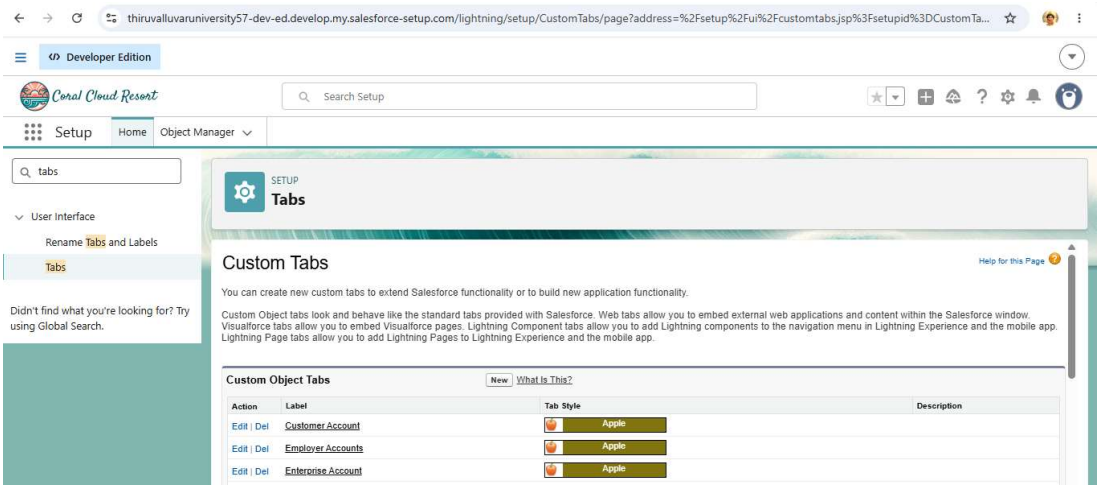

1. Go to setup page → type Tabs in Quick Find bar → click on tabs → New (under custom object tab)

2. Select Object(Employer Accounts) → Select the tab style → Next (Add to profiles page) keep it as default → Next (Add to Custom App) uncheck

the include tab .

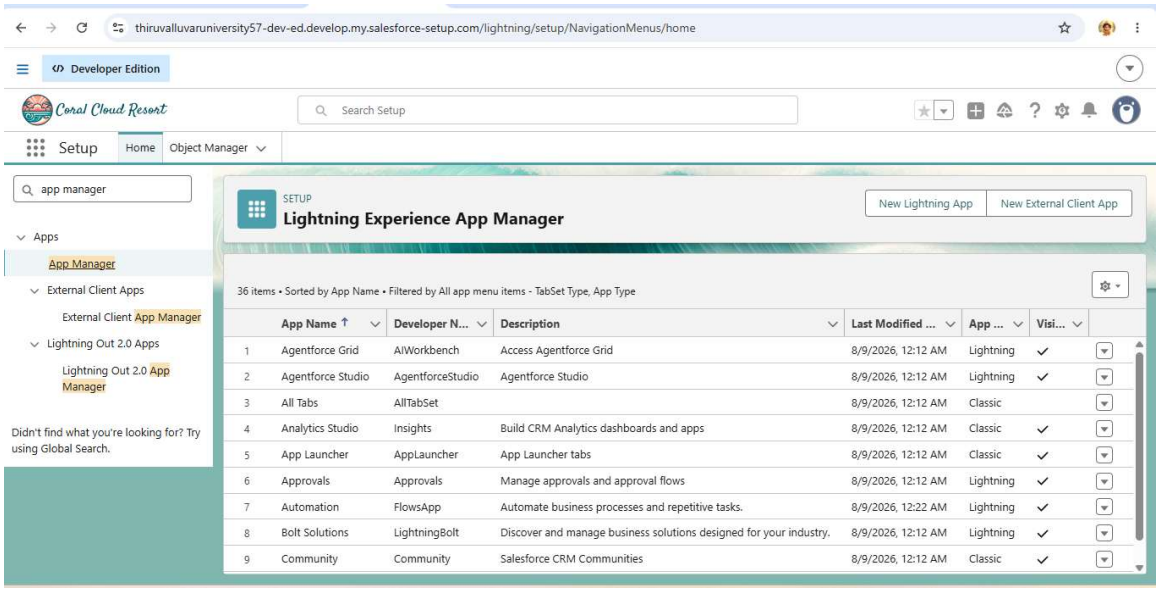

3. Make sure that the Append tab to users' existing personal customizations is checked.
4. Click save.
5. Repeat the same steps for Customer Accounts and Enterprise Accounts.

Milestone 4 - The Lightning App

Activity 1 : Create a lightning app

1. Go to setup page → search “app manager” in quick find → select “app manager” → click on New lightning App.

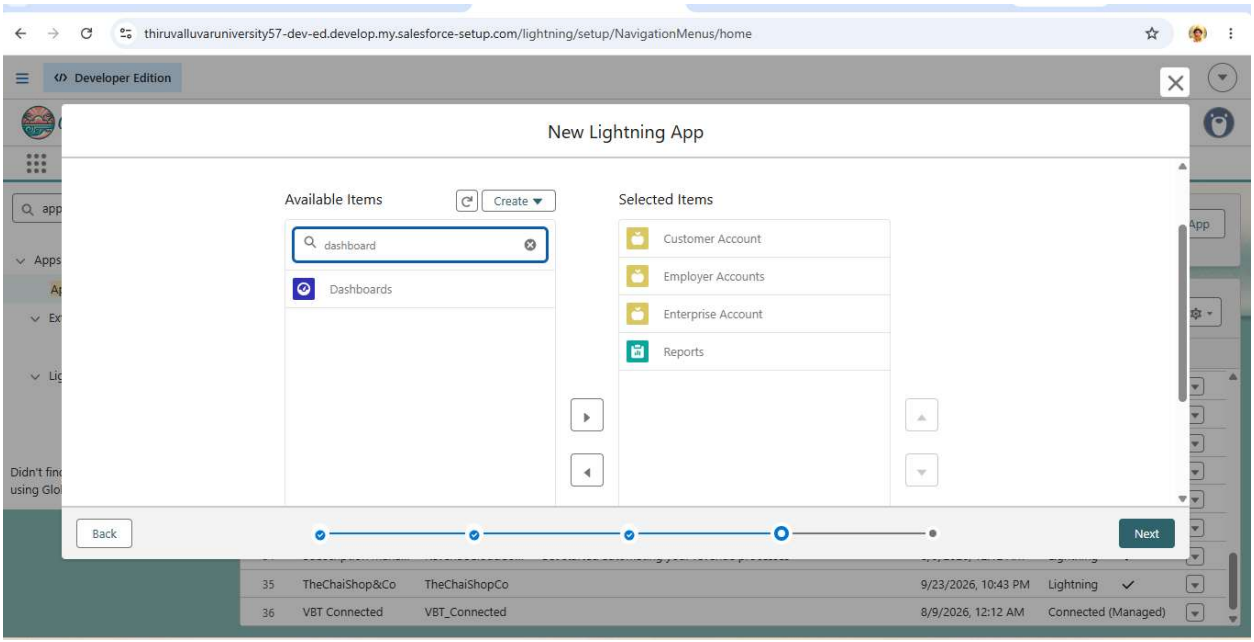

2. Fill the app name in app details and branding as follow
   App Name : TheChaiShop&Co
   Developer Name : Auto Populates
   Add image optional (if you want to give any image you can otherwise not mandatory) - Add Primary color Hex or leave it to default.
   Then click Next.

3. In App options
   Navigation style : Standard navigation
   Setup experience : setup
   Supporters form factors : Desktop and phone
   Then click Next

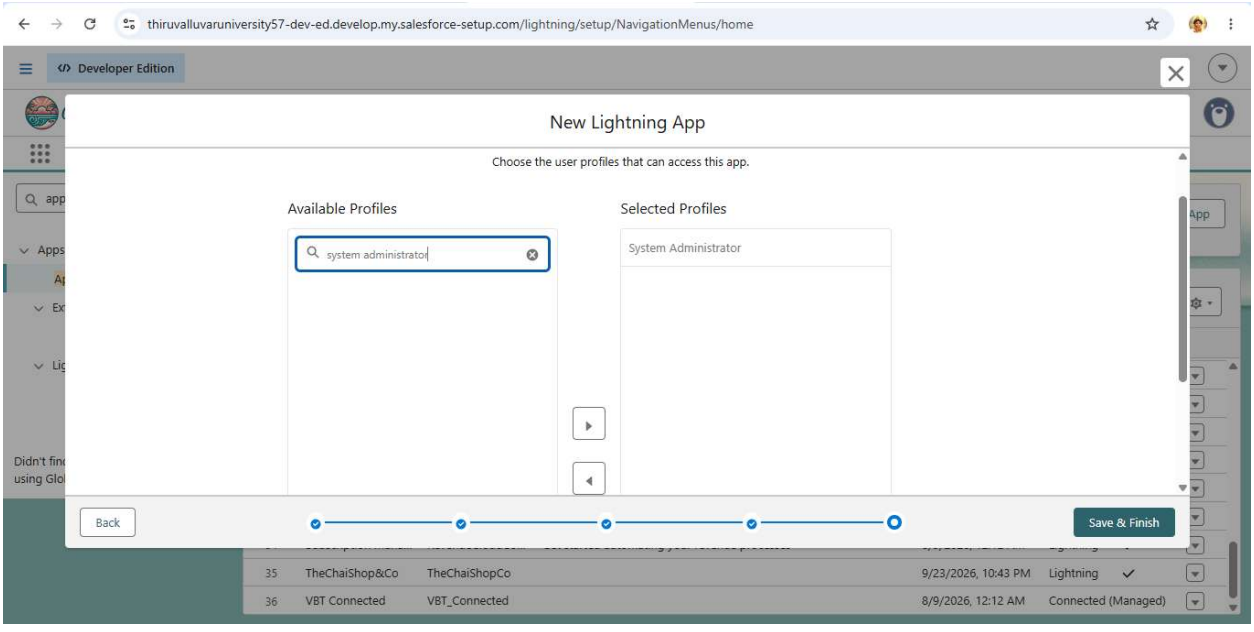

4. In Utility items
   Utility Bar alignment : Default
   Then click Next.

5. Navigation items
   Select the created Custom Objects and required standard objects
   - Customer Accounts
   - Employer Accounts
   - Enterprise Accounts
   - Reports

- Dashboards

6. To Add User Profiles : System Administrator

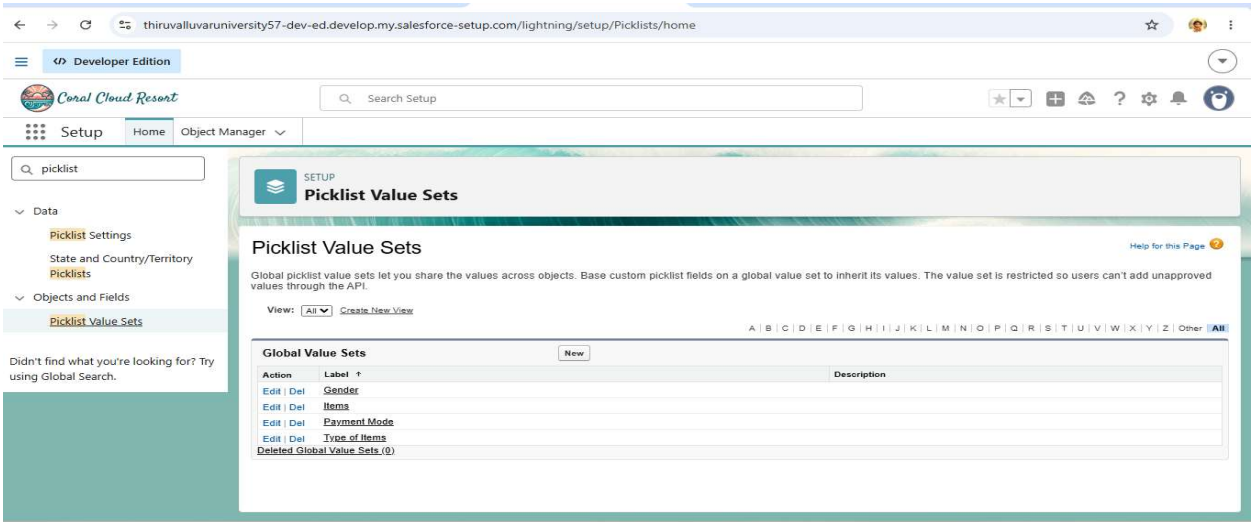

7. Click Save & Finish.

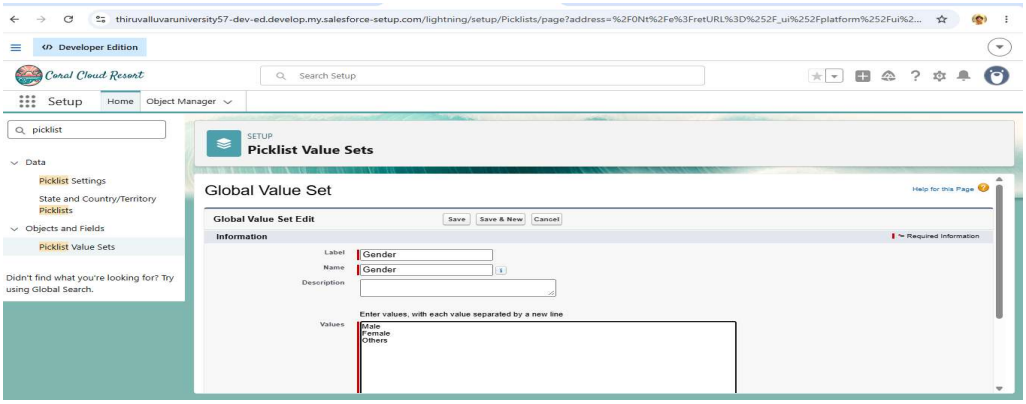

Milestone 5 : Global Picklist

Activity 1 : Create Global Plcklist

1. In Quick find box search for : Picklist value sets and click New.

- **Label** : Gender
  Name : Auto Populates
  Values : Male
  Female
  Others
  Click **Save & New.**

2. Create three more Global picklists following the same steps.
   - **Label** : Items
     Name : Auto populates
     Values : Platinum Tea Powder

Double Delight Tea Powder
Super Dust Tea Powder
Osmania Biscuits (Value Pack)
Osmania Biscuits (Premium Pack)
Dry Fruit Biscuits
Fruit Biscuits
Salt Biscuits
Multigrain Biscuits
Ragi Biscuits
Double Choco Chip Cookies
Butter Almond Cookies
Melting Moments Cookies
Honey Oats Cookies
Delight Box
Signature Box
Assorted Box

Click **Save & New.**

- **Label** : Payment Mode
  Name : Auto populates
  Values : Gpay
  PhonePe
  Paytm
  Credit or Debit card
  Cash.

  Click **Save & New.**

- **Label :** Type of Items
  Name : Auto populates
  Values : Tea powder
  Cookies
  Gift Hampers

  Click **Save.**

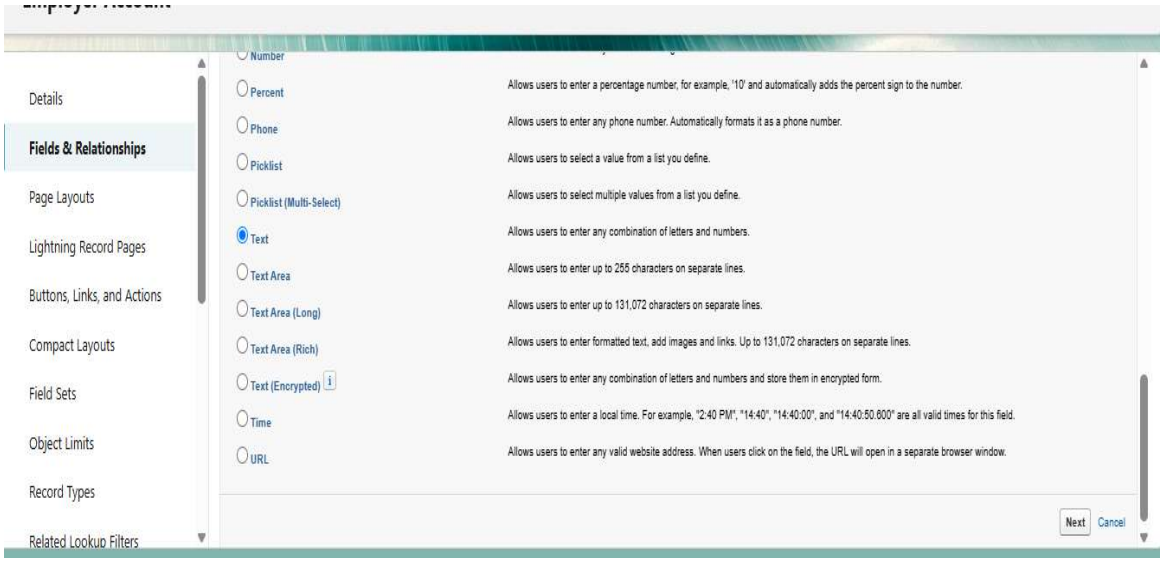

Milestone 6 : Fields & Relationships

Activity 1 : Create Custom fields for Employer Account

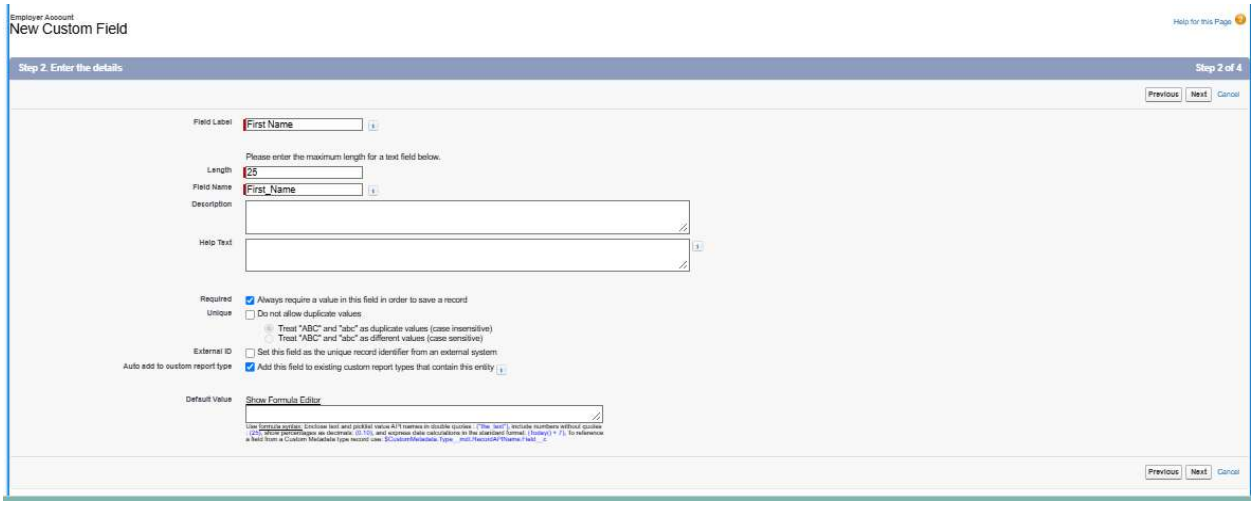

1. In your Salesforce org, click gear icon on the top left and select Setup to open Setup.
2. Click the Object Manager tab. If you don't see it, enter Object Manager in the Quick Find box.
3. From the object manager page, In the Quick Find box, Search for the custom object you just created : **Employer Account**
4. From the sidebar, click Fields & Relationships. Notice that there are already some fields there. Those are the standard fields.
5. Click New to create a custom field. Tip: Before creating a new field, do a quick search to make sure a similar one doesn't already exist.

6. Next, choose a data type as Text. Choosing a data type helps you format the field input.

7. Click on next.

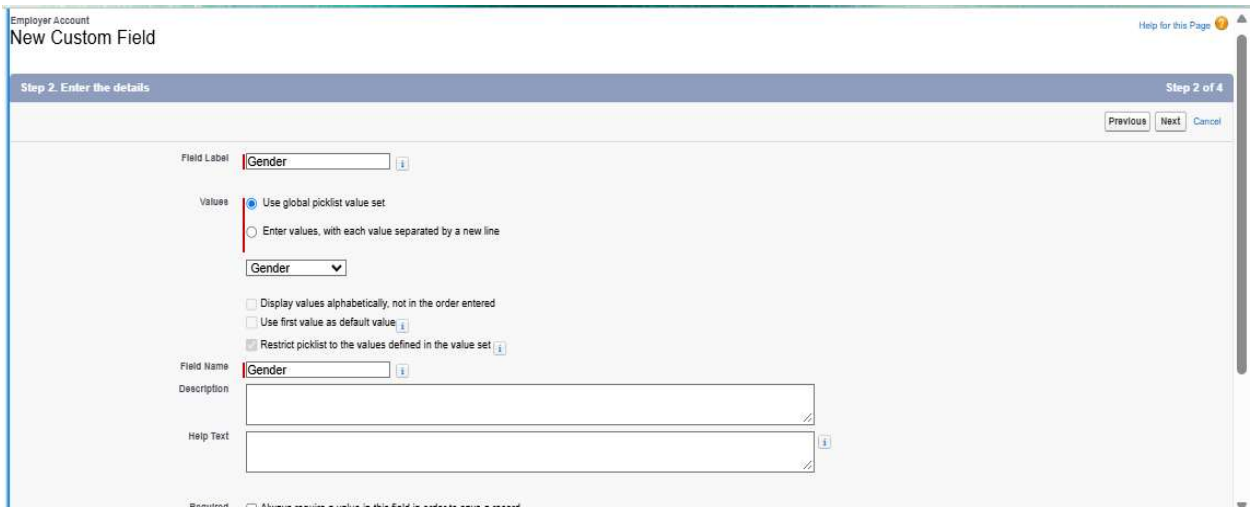

8. Data Type : Text
   Field Label: First Name
   Field Name : Auto Populates
   Length : 25
   Required : Check the box
   Click on Next → Next → Save and new.

9. Repeat the Same steps for remaining fields

   - Data Type : Text
     Field Label: Last Name
     Field Name : Auto Populates
     Length : 25
     Required : Check the box
     Click on Next → Next → Save and new.

   - Data Type : **PickList**
     Field Label: Gender
     Values : Use **Global Picklist** value set and select **Gender** from the dropdown menu.
     Field Name : Auto Populates.
     Required : Check the box
     Click on Next → Next → Save and new.

- Data Type : Phone
  Field Label : Phone Number
  Field Name : Auto Populates
  Required : Check the box
  Click on Next → Next → Save and new.

- Data Type : Email
  Field Label : Email ID
  Field Name : Auto Populates
  Required : Check the box
  Click on Next → Next → Save and new.

- Data Type : Date
  Field Label : Date of Birth
  Field Name : Auto Populates
  Required : check the box
  Click on Next → Next → Save and new.

- Data Type : Text
  Field Label : Aadhar Number
  Field Name : Auto Populates
  Length : 12
  Click on Next → Next → Save and new.

- Data Type : Text
  Field Label : PAN Details
  Field Name : PAN_Details
  Length : 10

Click on Next → Next → Save and new.

- Data Type : **Picklist**
  Field Label : Designation
  Field Name : Auto Populates
  Value : Enter value, with each value separated by a new line.
  Manager
  Finance and Accounting
  Kitchen Staff
  Cashier
  Servers
  Click on Next → Next → Save and new.

- Data Type : **Currency**
  Field Label : Salary
  Field Name : Auto Populates
  Click on Next → Next → Save.

Activity 2: Create Custom fields for Customer Account

1. Data Type : Text
   Field Label: First Name
   Field Name : Auto Populates
   Length : 25
   Required : Check the box
   Click on Next → Next → Save and new.

2. Data Type : Text
   Field Label: Last Name
   Field Name : Auto Populates
   Length : 25
   Required : Check the box
   Click on Next → Next → Save and new.

3. Data Type : **PickList**
   Field Label: Gender
   Values : Use **Global Picklist** value set and
   select Gender from the dropdown menu.
   Field Name : Auto Populates.

Required : Check the box
Click on Next → Next → Save and new.

4. Data Type : Phone
   Field Label : Phone Number
   Field Name : Auto Populates
   Required : Check the box
   Click on Next → Next → Save and new.

5. Data Type : Date
   Field Label : Date of Birth
   Field Name : Auto Populates
   Required : check the box
   Click on Next → Next → Save and new.

6. Data Type : **Formula**
   Field Label : Date of Birthday is today ?
   Field Name : Auto Populates
   Formula Return : **Checkbox**
   Formula :

```
IF(
AND(
DAY( TODAY() ) = DAY( Date_of_Birth__c ) ,
MONTH ( TODAY()) = MONTH( Date_of_Birth__c )),
TRUE,
FALSE)
```

   Click on Next → Next → Save and new.

7. Data Type : Email
   Field Label : Email ID
   Field Name : Auto Populates
   Required : Check the box
   Click on Next → Next → Save and new.

8. Date Type : Text
   Field Label : Address
   Field Name : Auto Populates
   Length : 125
   Click on Next → Next → Save and new.

9. Date Type : **Multi Select Picklist**

Field Label : Type of Items
Values : Use **Global Picklist** value set and
select **Type of Items** from the dropdown menu.
Field Name : Auto Populates.
Required : Check the box
Click on Next → Next → Save and new.

10. Date Type : **Multi Select Picklist**
Field Label : Products purchased
Values : Use **Global Picklist** value set and
select **Items** from the dropdown menu.
Field Name : Auto Populates.
Required : Check the box
Click on Next → Next → Save and new.

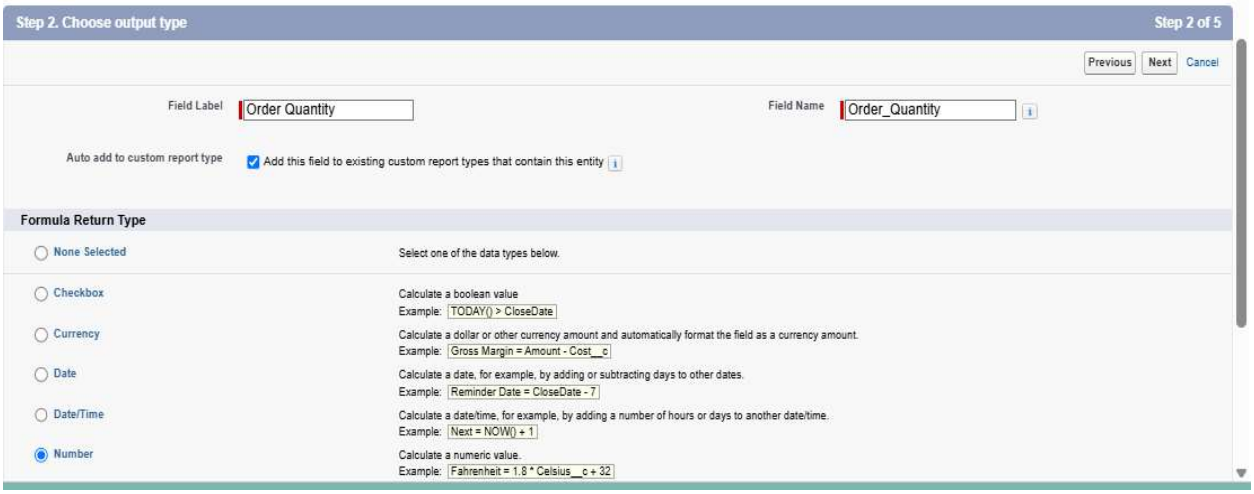

11. Date Type : **Multi Select Picklist**
Field Label : Chai
Value : Enter value, with each value separated by a new line.
TheChaiShop&Co Special Tea
Single Tea
Masala Tea
Lemon Tea
Ginger Tea
Green Tea
Sugar Free Tea
Click on Next → Next → Save and new.

12. Data Type : **Picklist**
Field Label : Payment Mode
Values : Use **Global Picklist** value set and
select **Payment Mode** from the dropdown menu.
Field Name : Auto Populates.
Required : Check the box
Click on Next → Next → Save and new.

13. Data Type : **Lookup Relationship**
Related To : Employer Account
Field Label : Associated Employer
Field Name : Auto Populates
Click on Next → Next → Save and new.

14. Data Type : **Formula**
    Field Label : Order Quantity
    Field Name : Auto Populates
    Formula Return : **Number**

Enter Formula = Quantity (Number) =

```
IF(INCLUDES( Products_Purchased__c , "Platinum Tea Powder"), 1, 0 ) +
        IF(INCLUDES( Products_Purchased__c , "Double Delight Tea Powder"), 1, 0 ) +

Click on Next → Next → Save.

Activity 3: Create Custom fields for Enterprise Account

1. Data Type : Text
   Field Label: Enterprise Name
   Field Name : Auto Populates
   Length : 25
   Required : Check the box
   Click on Next → Next → Save and new.

2. Data Type : Phone
   Field Label : Phone Number
   Field Name : Auto Populates
   Required : Check the box
   Click on Next → Next → Save and new.

3. Data Type : Email
   Field Label : Email ID
   Field Name : Auto Populates
   Required : Check the box
   Click on Next → Next → Save and new.

4. Date Type : Text
   Field Label : Address
   Field Name : Auto Populates
   Length : 125
   Click on Next → Next → Save and new.

5. Date Type : **Multi Select Picklist**
   Field Label : Type of Items
   Values : Use **Global Picklist** value set and
   select **Type of Items** from the dropdown menu.
   Field Name : Auto Populates.
   Required : Check the box

10. Data Type : **Picklist**
    Field Label : Payment Mode
    Values : Use **Global Picklist** value set and
    select **Payment Mode** from the dropdown menu.
    Field Name : Auto Populates.
    Required : Check the box
    Click on Next → Next → Save.

Milestone 7 : Page Layouts

For the personalized field view in Customer Accounts, let's create two page layouts Online orders and Walk-In orders.

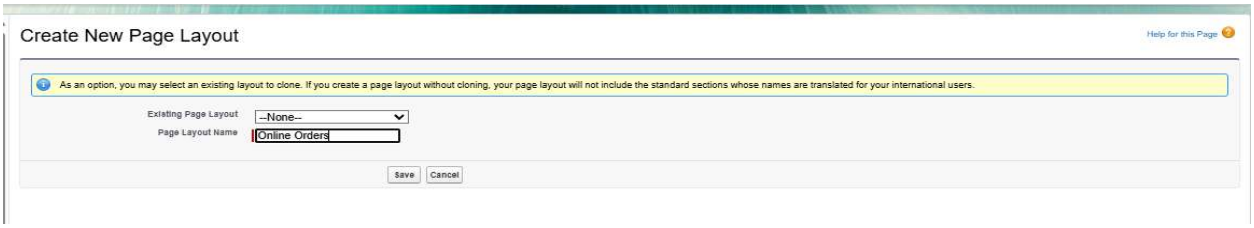

Activity 1: Online Orders page layout

1. Go to the setup page → click on object manager → From drop down click edit for **Customer Account** object.

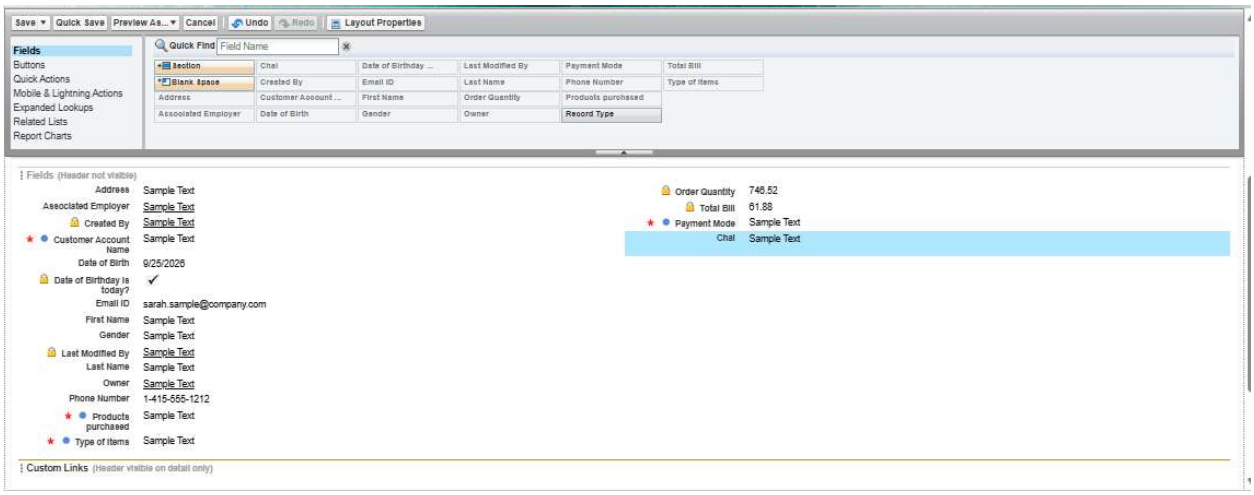

2. Click on the Page Layouts → click New.

3. Page Layout Name : Online Orders and click Save.

4. Drag and Arrange all the required fields as shown below.

5. Click **Save**.

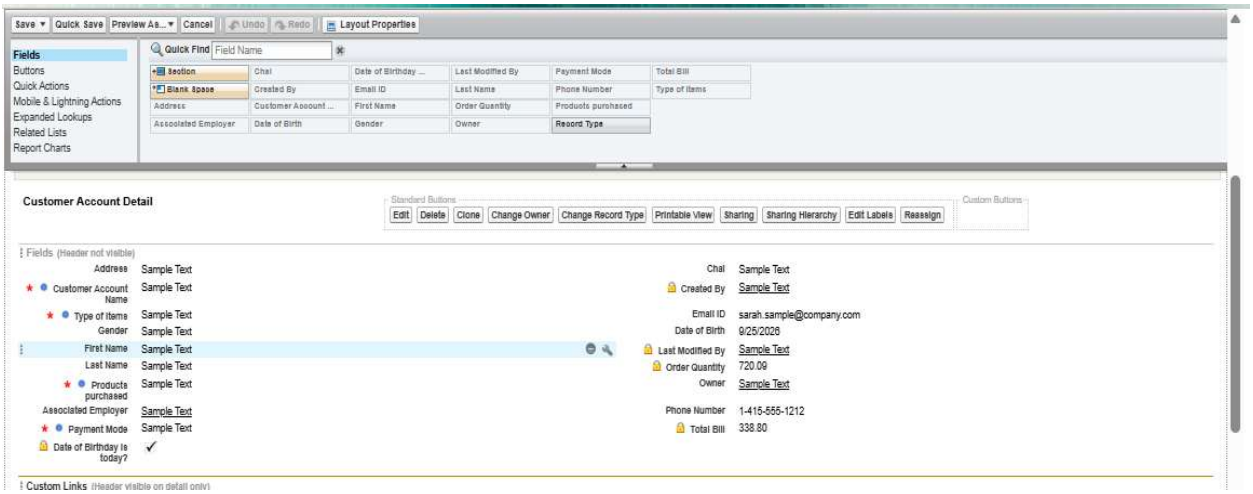

Activity 2: Walk-In Orders page layout

1. Go to the setup page → click on object manager → From drop down click edit for **Customer Account** object.

2. Click on the Page Layouts → click New.

3. Page Layout Name : Walk-In orders and click save.

4. Drag and Arrange all the required fields as shown below.

5. Click **Save**.

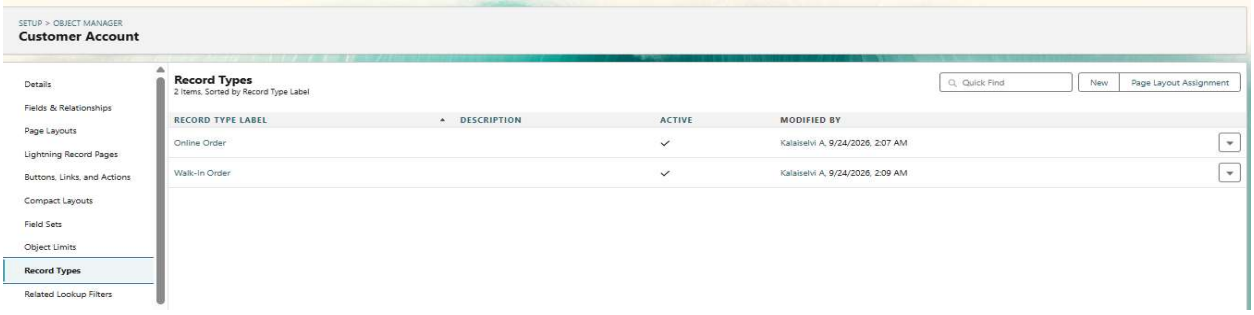

Milestone 8 - Record Types

To Differentiate the records and data stored in Customer Accounts, let's create two different Record Types.
Online orders and Walk-In orders.

Activity 1: Online Orders Record Type

1. Go to the setup page → click on object manager → From drop down click edit for **Customer Account** object.

2. Click on the Record Types → click New.

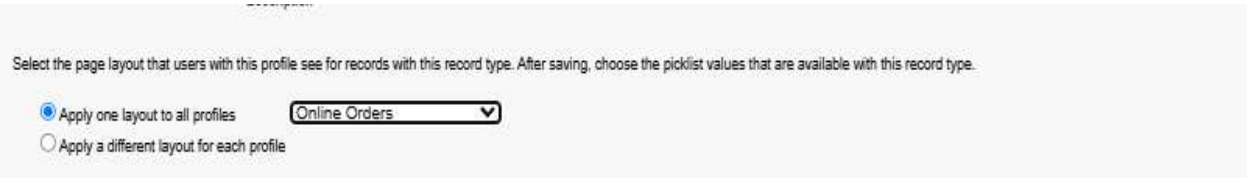

3. Enter Details :
   Existing Record Type : Master
   Record Type Label : Online Order
   Record Type Name : Auto Populates

Active : Tick the checkbox
Click Next

4. In Assign Page Layouts
    - Select Apply one layout to all profiles : select **Online orders** from the drop down menu.

5. Click **Save and New**.

Activity 2: Walk-In Orders Record Type

1. Go to the setup page → click on object manager → From drop down click edit for **Customer Account** object.

2. Click on the Record Types → click New.

3. Enter Details :
   Existing Record Type : Master
   Record Type Label : Walk-In Order
   Record Type Name : Auto Populates
   Active : Tick the checkbox
   Click Next

4. In Assign Page Layouts
    - Select Apply one layout to all profiles : select **Walk-In orders** from the drop down menu.

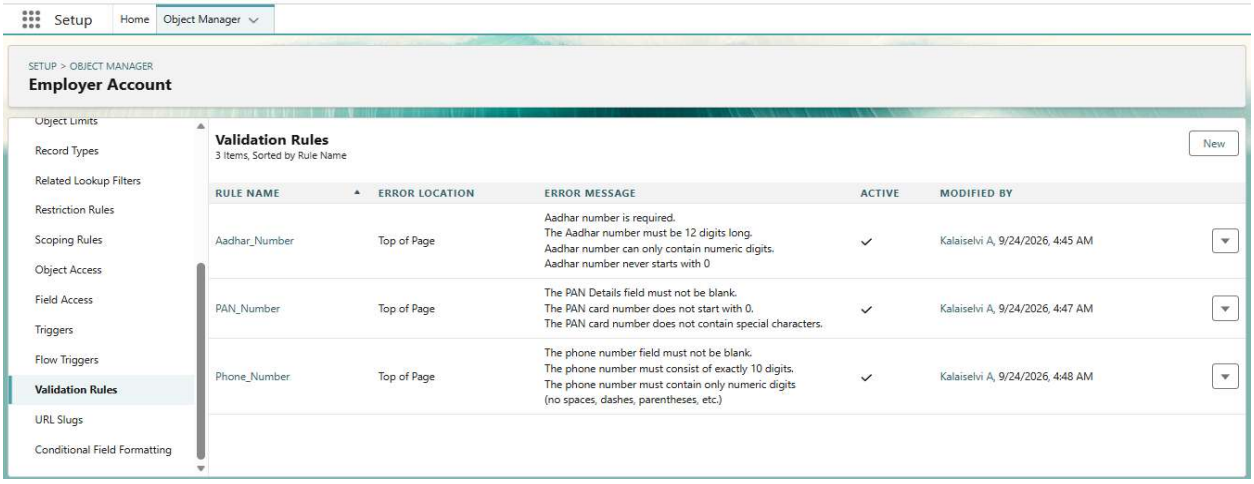

5. Click **Save.**

Milestone 9 - Validation Rules

Activity 1: On Employer Account

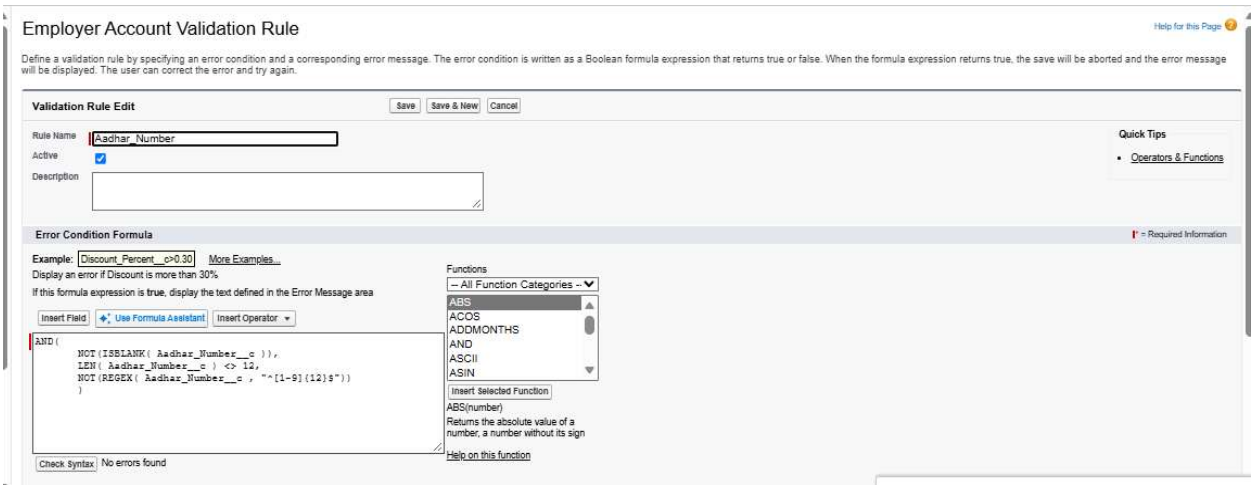

1. Go to the setup page → click on object manager → From drop down click edit for **Employer Account** object.

2. Click on the validation rule → click New.

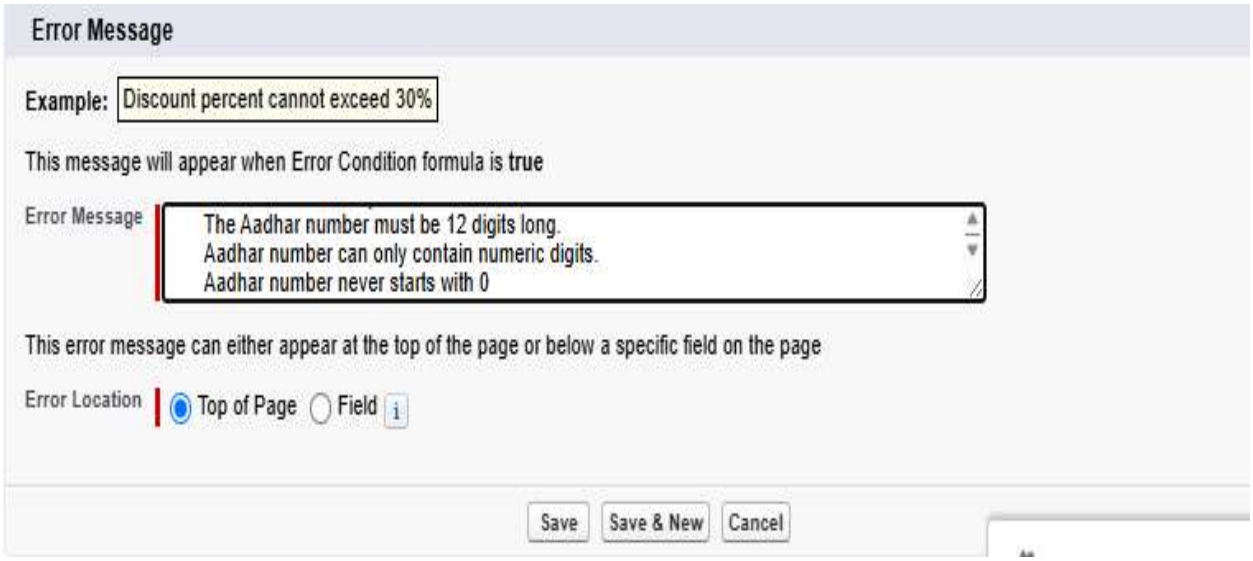

3. **Enter Rule Name :** Aadhar Number
   Error Condition Formula :

```
AND(
NOT(ISBLANK( Aadhar_Number__c )),
LEN( Aadhar_Number__c ) <> 12,
NOT(REGEX( Aadhar_Number__c , "^[1-9]{12}$"))
)
```

4. **Error Message** : Aadhar number is required.
   The Aadhar number must be 12 digits long.
   Aadhar number can only contain numeric digits.
   Aadhar number never starts with 0

5. Click **Save & New.**

6. Repeat the same steps and create two more validation rules on the employer account object.

   - **Enter Rule Name** : PAN Number
     Error Condition Formula :

     AND(
     NOT(ISBLANK(Phone_Number__c)),
     NOT(REGEX(Phone_Number__c , "^[1-9]{10}$")),

```
NOT(REGEX( Phone_Number__c , "^\\d+$"))
)
```

Error Message : The PAN Details field must not be blank.
The PAN card number does not start with 0.
The PAN card number does not contain special characters.

Click **Save & New.**

- **Enter Rule Name** : Phone Number
  Error Condition Formula :

```
AND(
NOT(ISBLANK( Phone_Number__c )),
NOT(REGEX( Phone_Number__c , "^[1-9]{10}$")),
NOT(REGEX( Phone_Number__c , "^\\d+$"))
)
```

Error Message :
The phone number field must not be blank.
The phone number must consist of exactly 10 digits.
The phone number must contain only numeric digits
(no spaces, dashes, parentheses, etc.)

Click **Save.**

Activity 2: On Customer Account

1. Go to the setup page → click on object manager → From drop down click edit for **Customer Account** object.

2. Click on the validation rule → click New.

3. **Enter Rule Name** : Phone Number

   Error Condition Formula :

```
AND(
NOT(ISBLANK( Phone_Number__c )),
NOT(REGEX( Phone_Number__c , "^[1-9]{10}$")),
NOT(REGEX( Phone_Number__c , "^\\d+$"))
)
```

   Error Message :
   The phone number field must not be blank.

The phone number must consist of exactly 10 digits.
The phone number must contain only numeric digits
(no spaces, dashes, parentheses, etc.)

4. Click **Save.**

Activity 3: On Enterprise Account

1. Go to the setup page → click on object manager → From drop down click edit for **Customer Account** object.

2. Click on the validation rule → click New.

3. **Enter Rule Name** : Phone Number

   Error Condition Formula :

   ```
   AND(
   NOT(ISBLANK( Phone_Number__c )),
   NOT(REGEX( Phone_Number__c , "^[1-9]{10}$")),
   NOT(REGEX( Phone_Number__c , "^\\d+$"))
   )
   ```

   Error Message :

   The phone number field must not be blank.
   The phone number must consist of exactly 10 digits.
   The phone number must contain only numeric digits
   (no spaces, dashes, parentheses, etc.)

4. Click **Save.**

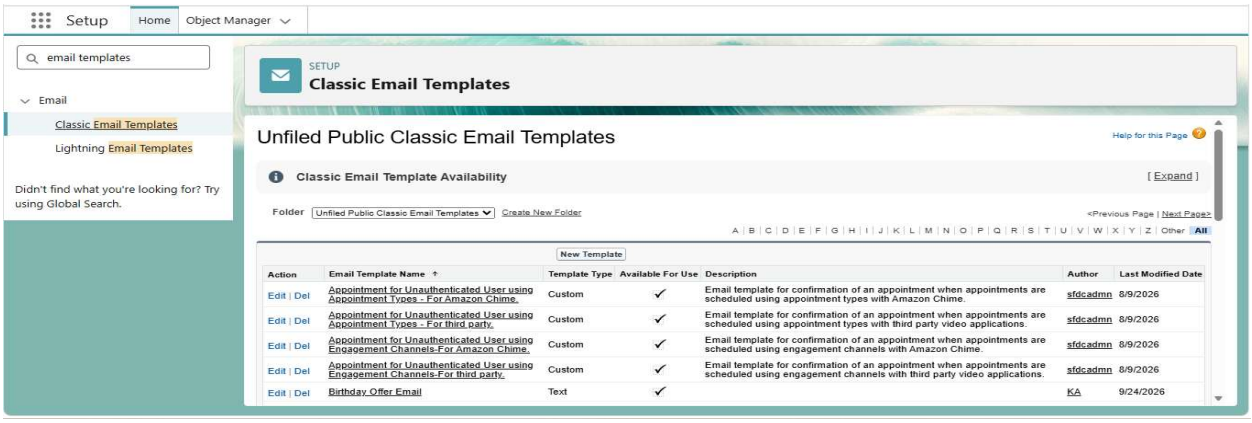

Milestone 10 - Email Template

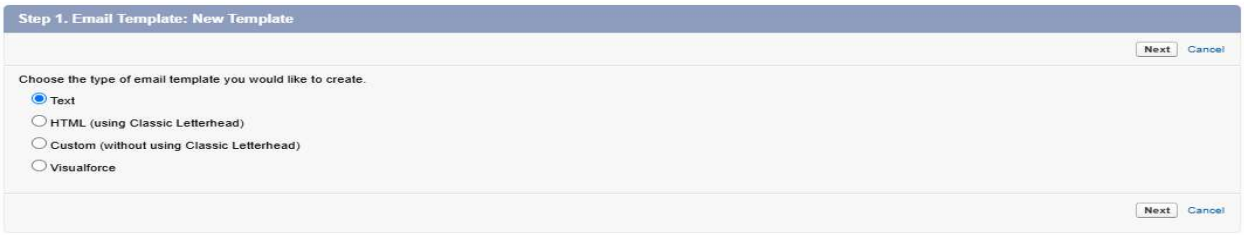

Activity 1: Email Template

1. Go to setup, In quick find box enter Email template → click on classic Email Template.

2. Click on→ New Email Template

3. Choose the type of email template you would like to create : **Text** and click **Next**.

- **Available Merge Fields**
  Select Field Type : Customer Accounts Fields
  Select Field : First Name
  Copy Merge Field value : Auto Populates, Copy the value and paste it in the email body where required.

4. Folder : Unfiled public Classic Email templates
5. Click on available for use
6. Email Template Name is “Birthday Offer Email”
7. Template Unique Name : Auto populated
8. Subject : Special Birthday Offer Inside!
9. Email body :

Dear {!Customer_Account__c.First_Name__c},

Happy Birthday from all of us at TheChaiShop&Co! 🎉🎂 We hope your special day is filled with joy, laughter, and wonderful memories.

To celebrate your birthday, we have a special gift just for you! As a token of our appreciation for your continued support, we're delighted to offer you an exclusive birthday discount.

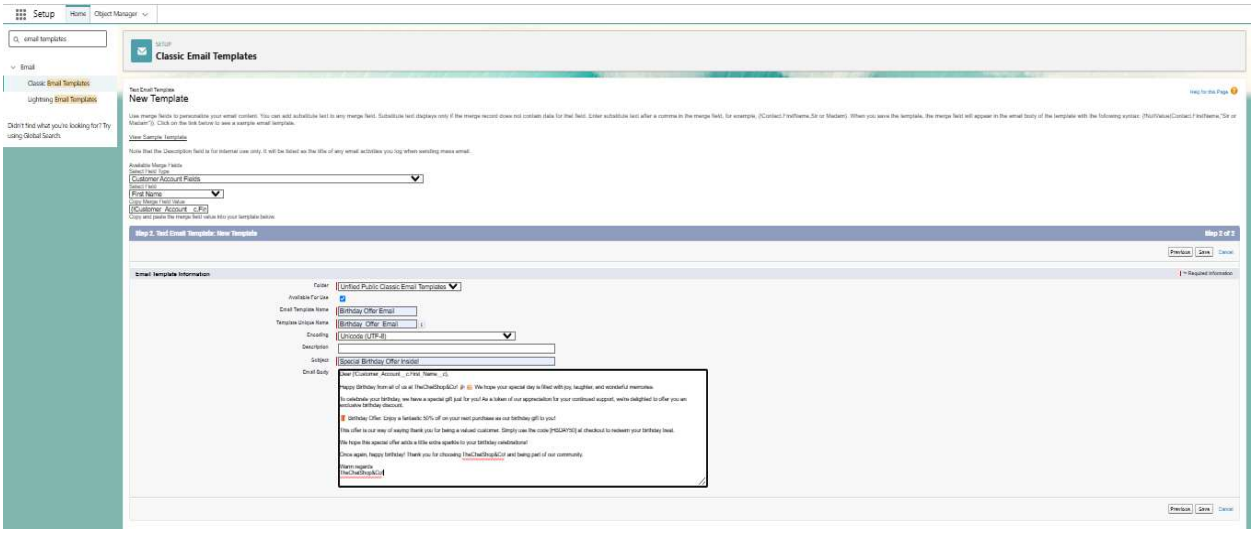

🎁 Birthday Offer: Enjoy a fantastic 50% off on your next purchase as our birthday gift to you!

This offer is our way of saying thank you for being a valued customer. Simply use the code [HBDAY50] at checkout to redeem your birthday treat.

We hope this special offer adds a little extra sparkle to your birthday celebrations!

Once again, happy birthday! Thank you for choosing TheChaiShop&Co! and being part of our community.

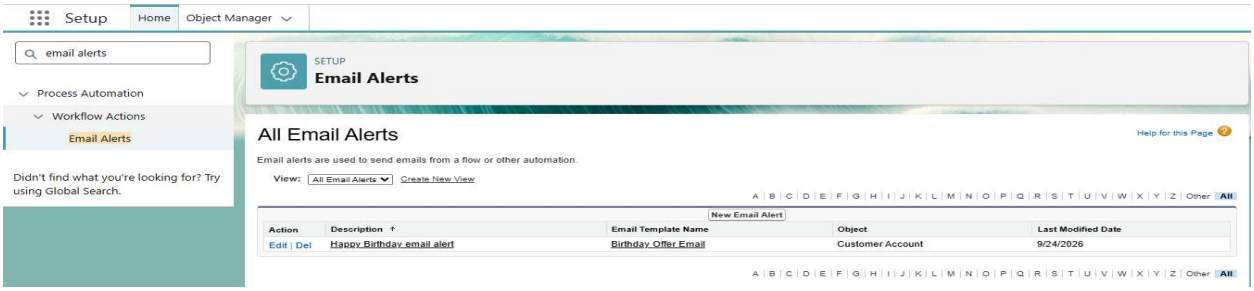

Warm regards
TheChaiShop&Co!

10. Click **Save.**

Activity 2: Email Alert

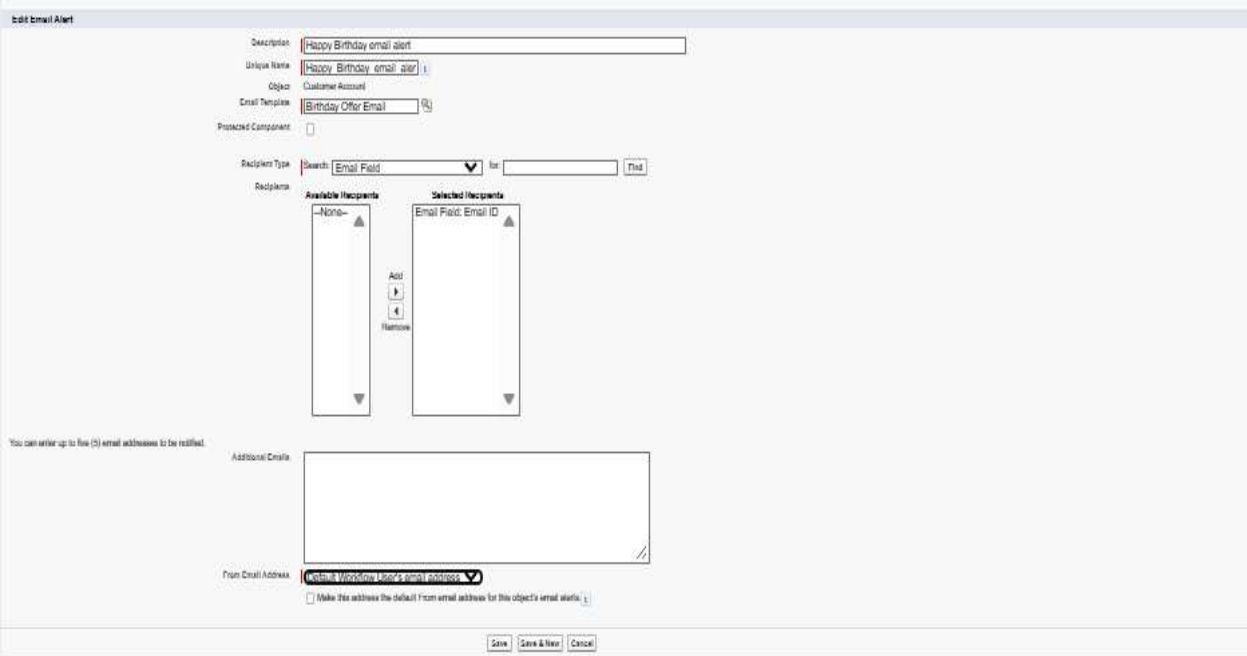

1. Go to setup, In quick find box enter Email Alert → click on Email Alert .

2. Click on New Email Alert.

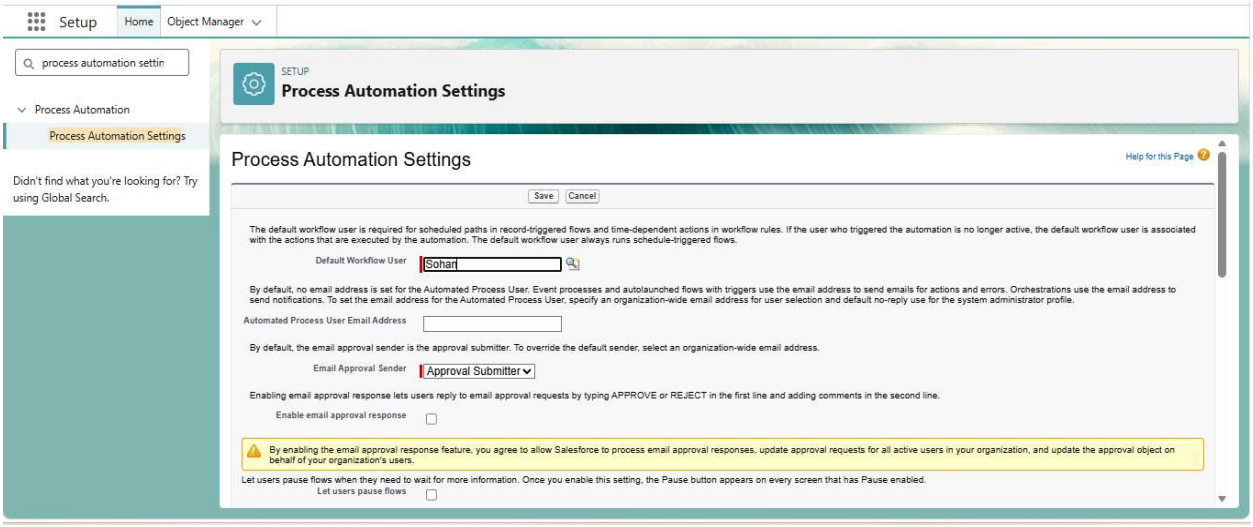

3. **Description** : Happy Birthday email alert
   Unique Name : Auto Populates

Object : Customer Account
Email Template : Search for **Birthday Offer Email**

Milestone 11 - Flows

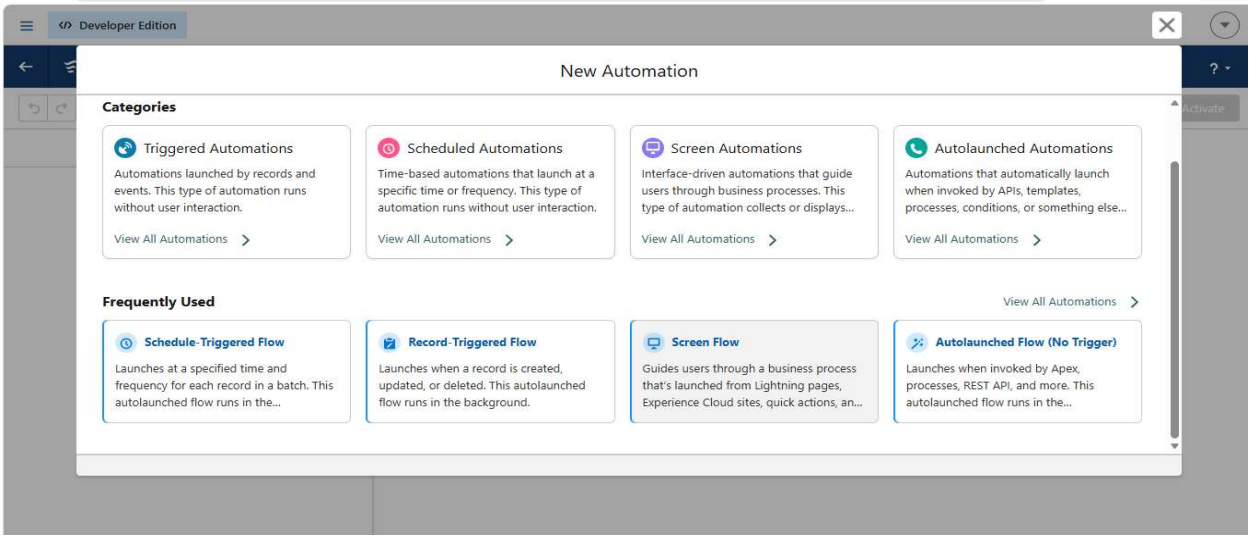

Let’s create a scheduled Triggered flow to automate the Birthday offer mails.

Activity 1: Schedule Triggered Flow

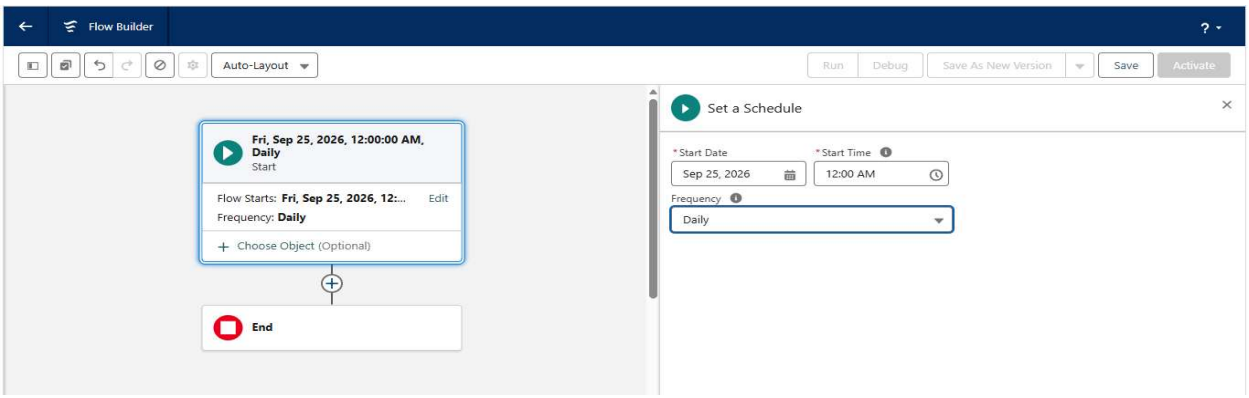

1. Go to setup, Type Flow in quick find box → Click on the Flow and Select the New Flow.

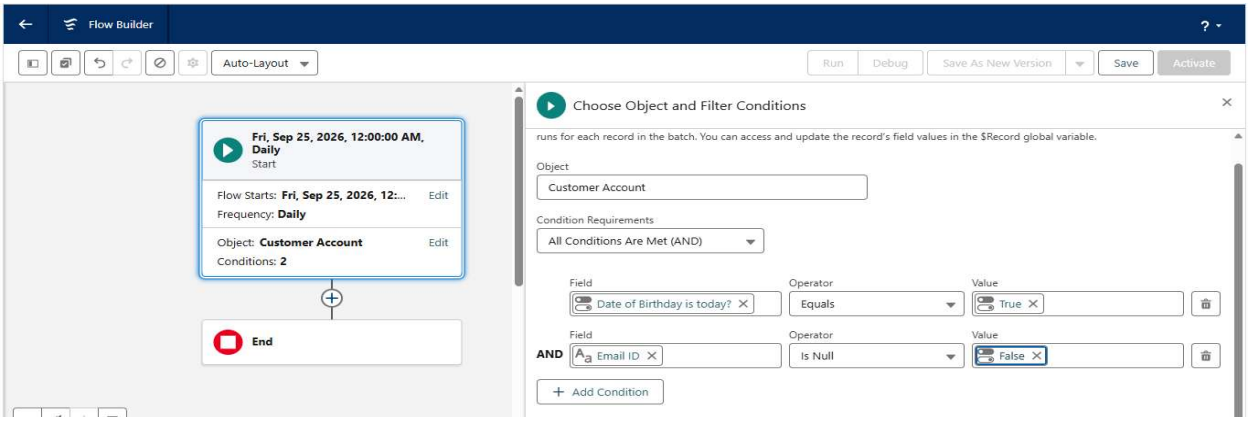

2. Select Schedule - Triggered Flow and click Create.

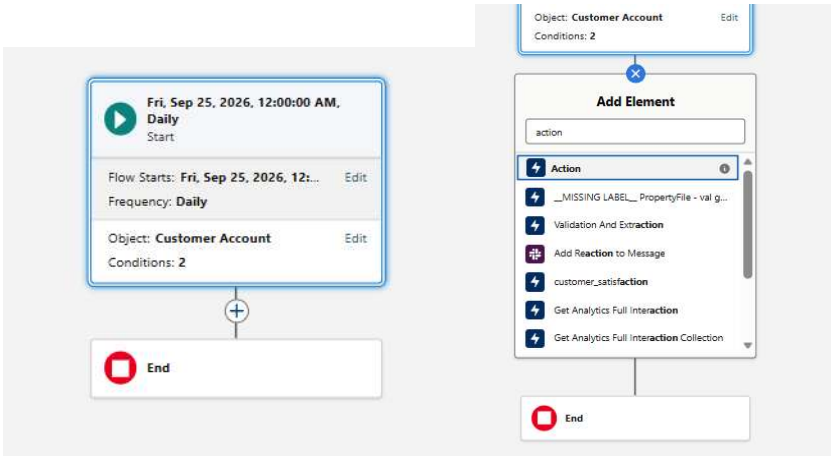

3. **Set a Schedule**
   Start Date : Enter the Date, when you want to start the flow.
   Start Time : Enter the Time, when you want to start the flow.
   Frequency : Daily

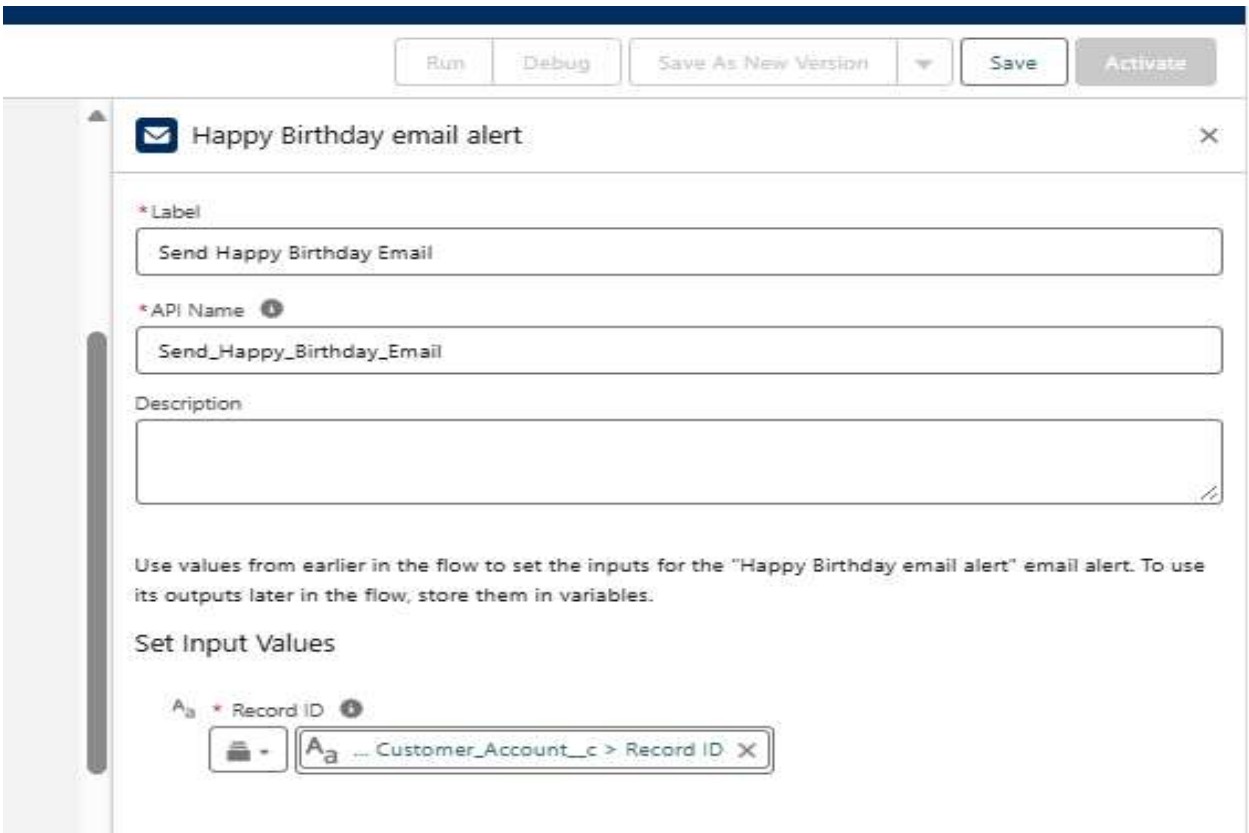

4. **Create Object**
   Object : Customer Account
   Condition Requirements : All conditions Are Met (AND)
   - Field : Date_of_Birthday_is_today__c
     Operator : Equals
     Value : $GlobalConstant.True
   - Field : Email_ID_c
     Operator : IS NULL
     Value : $GlobalConstant.False

5. Click (+) Icon on the flow builder and Select **Action Component.**

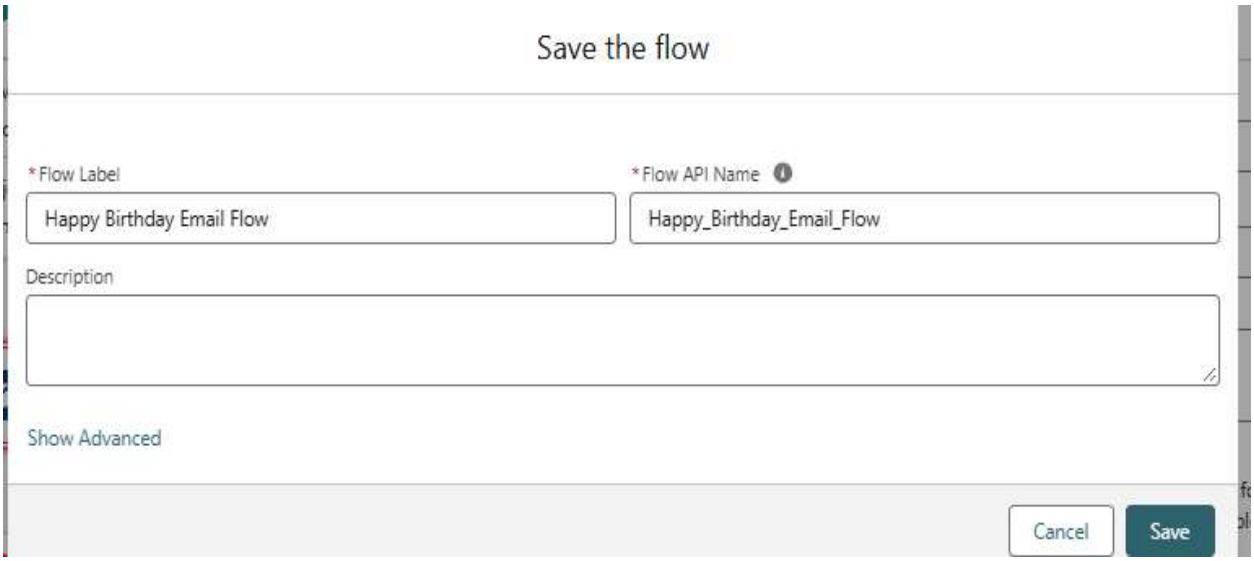

6. In New Action Page
   Filter By : Type and select Email Alert
   In Action : Search and select Happy Birthday email alert
   Label : Send Happy Birthday Email
   API Name : Auto Populates
   Set Input Values for the Selected Action : Record ID : {!$Record.Id}

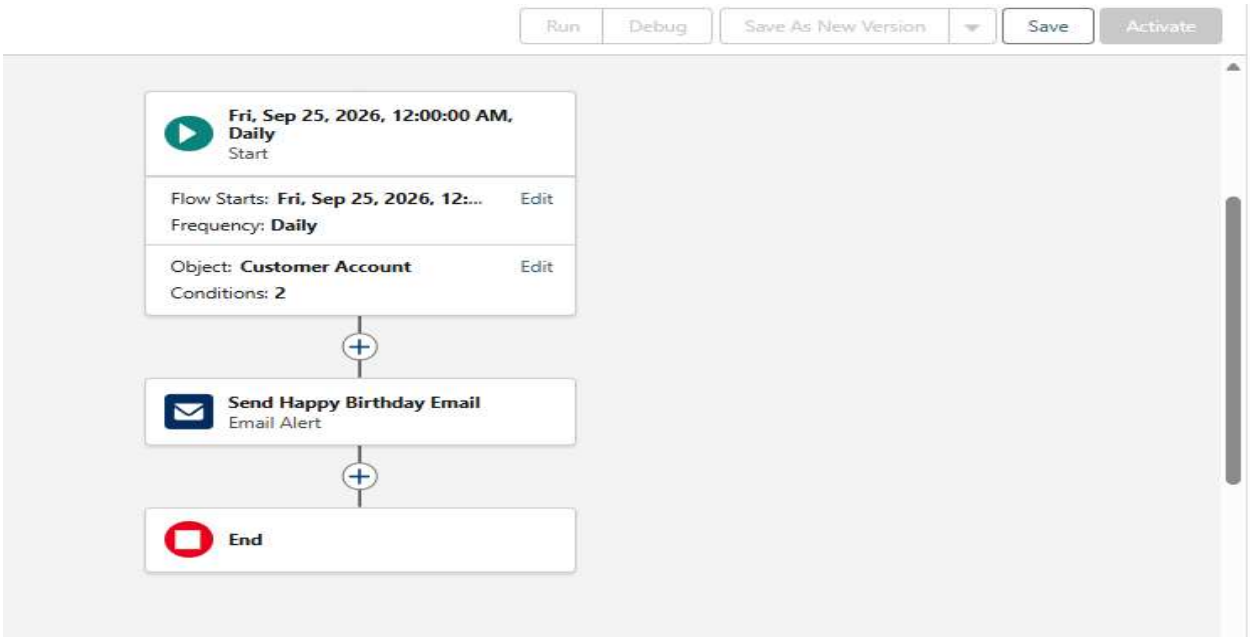

7. Click **Save**.

8. Click Save on the top right
   Flow Label : Happy Birthday Email Flow
   Flow API Name : Auto Populates
   Click **Save.**

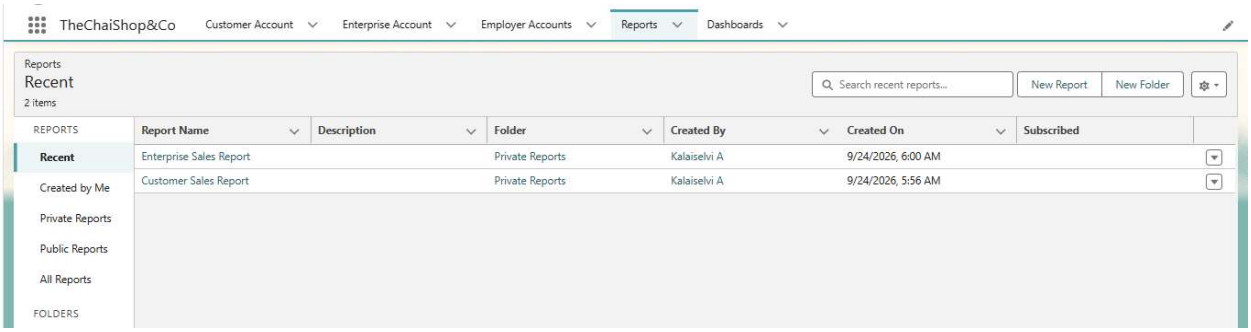

9. Click **Activate**.

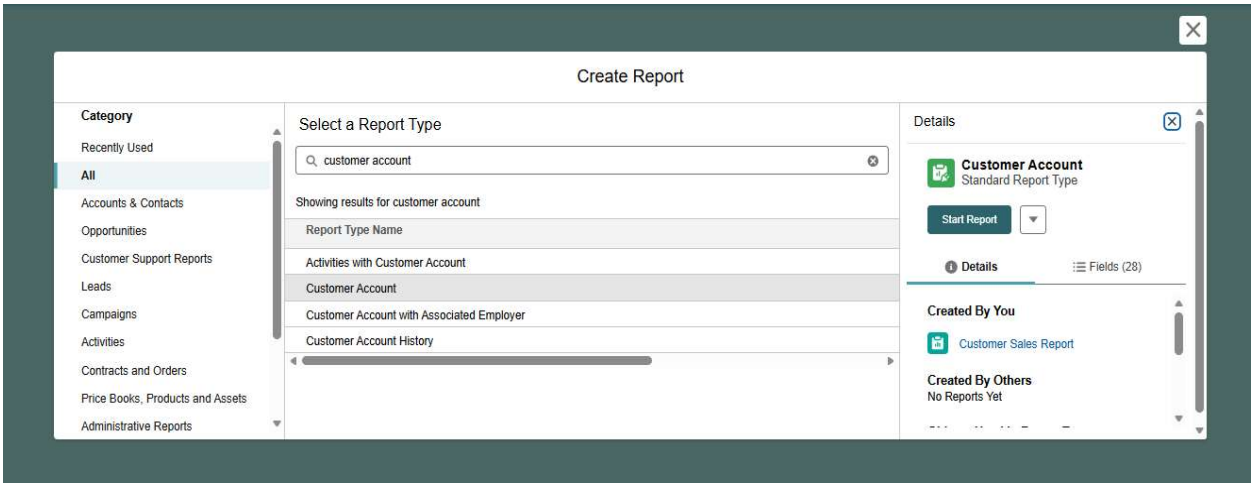

Milestone 12 - Reports & Dashboards

Activity 1: Customer Account Sales Report

1. Click App Launcher and select TheChaiShop&Co.
2. Click Reports
3. Click New Report

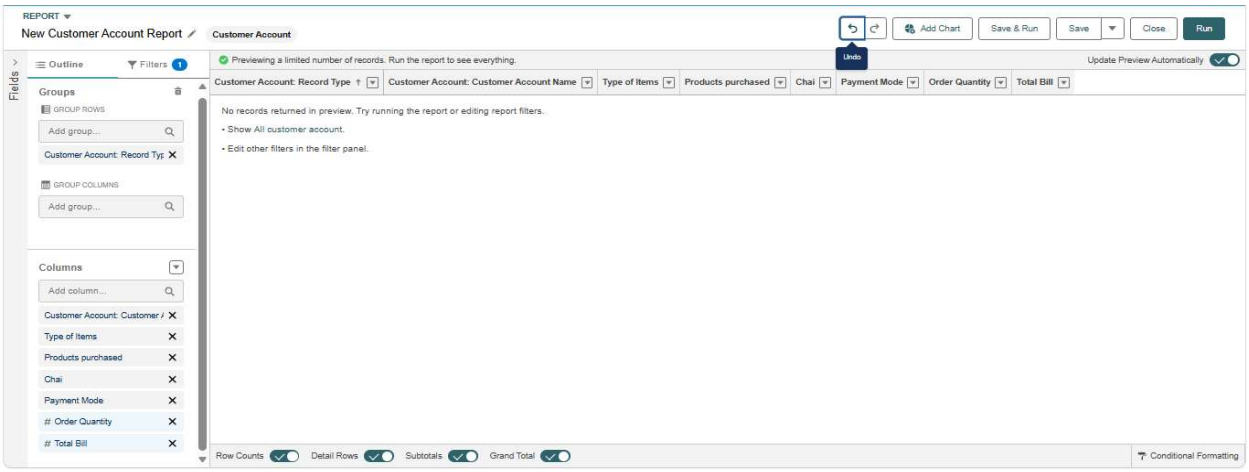

4. In search type Customer Accounts and Select Customer Accounts.
5. Click Start Report.

6. Click the toggle **Update Preview Automatically** to **ON**.
7. Drag and Drop all the required Columns from the Outline pane.
8. **Group Rows** : Search and Select
   Customer Account: Record Type
9. Click Add Chart on the top.

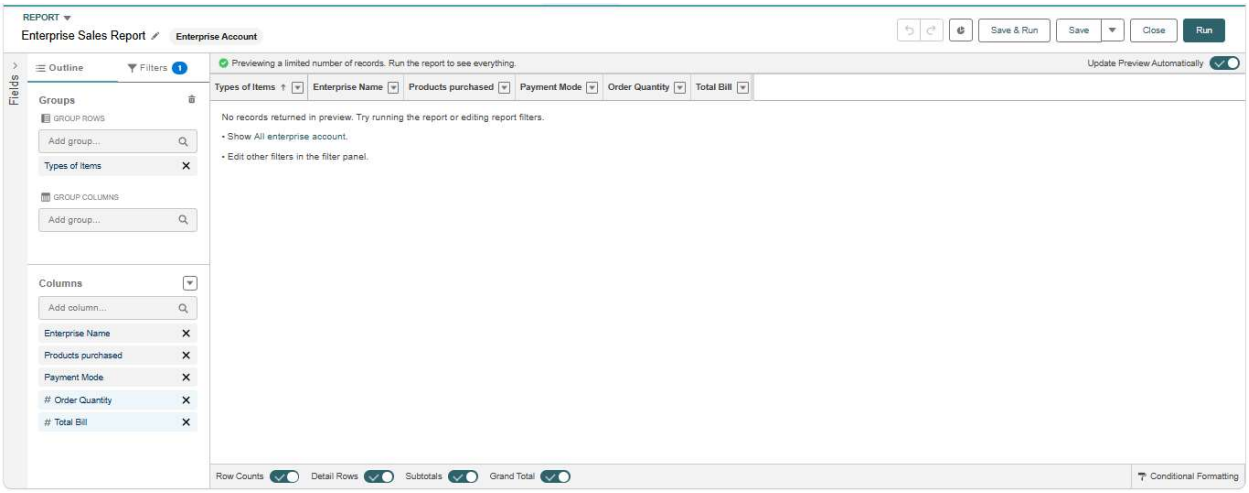

10. Click **Save** on the top right.
    Enter
    Report Name: Customer Account Sales Report
    Report Unique Name : Auto Populates
    Click **Save**.

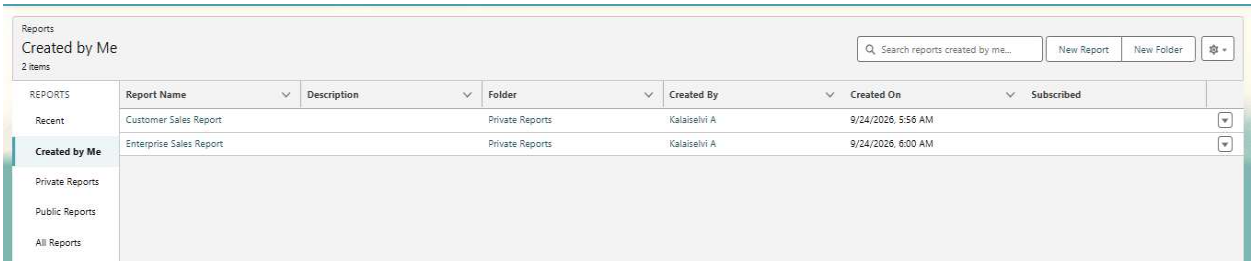

Activity 2: Enterprise Account Sales Report

1. Repeat the same steps to create another report.
2. Click Reports
3. Click New Report
4. In search type Enterprise Accounts and Select Enterprise Accounts.
5. Click Start Report.
6. Click the toggle **Update Preview Automatically** to **ON**.
   Drag and Drop all the required Columns from the Outline pane.
   Group Rows : Search and Select
   Type of Items.
7. Click Add Chart on the top.

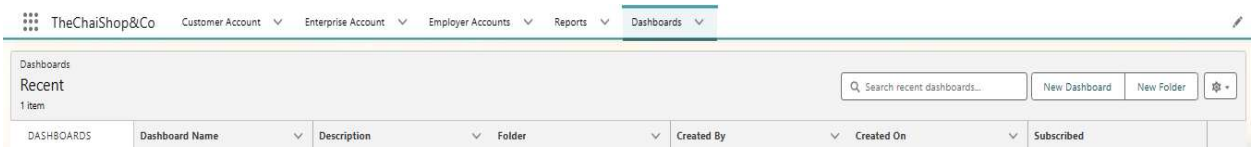

8. Click **Save** on the top right.
   a. Enter
   b. Report Name : Enterprise Account Sales Report
   c. Report Unique Name : Auto Populates
   d. Click **Save**.

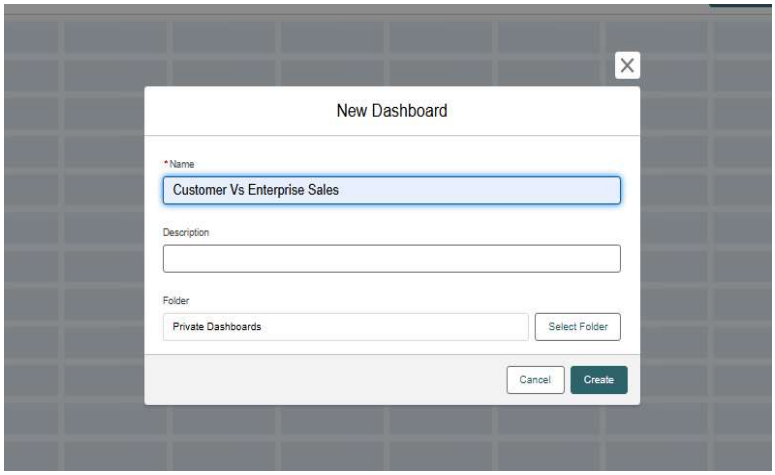

Activity 3: Dashboard

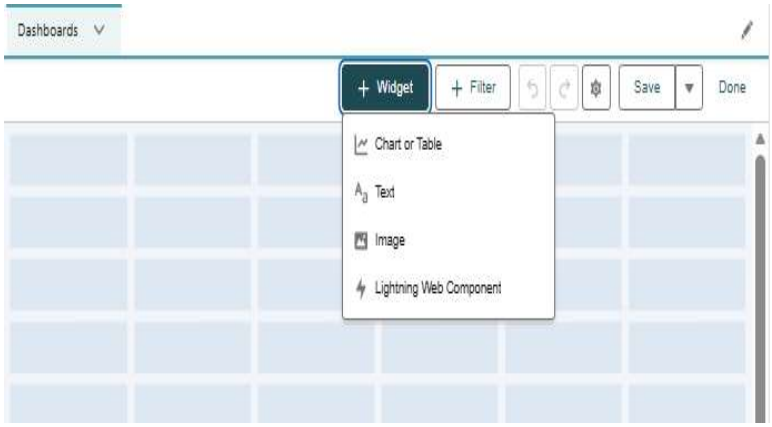

1. Click Dashboards
2. Click New Dashboards

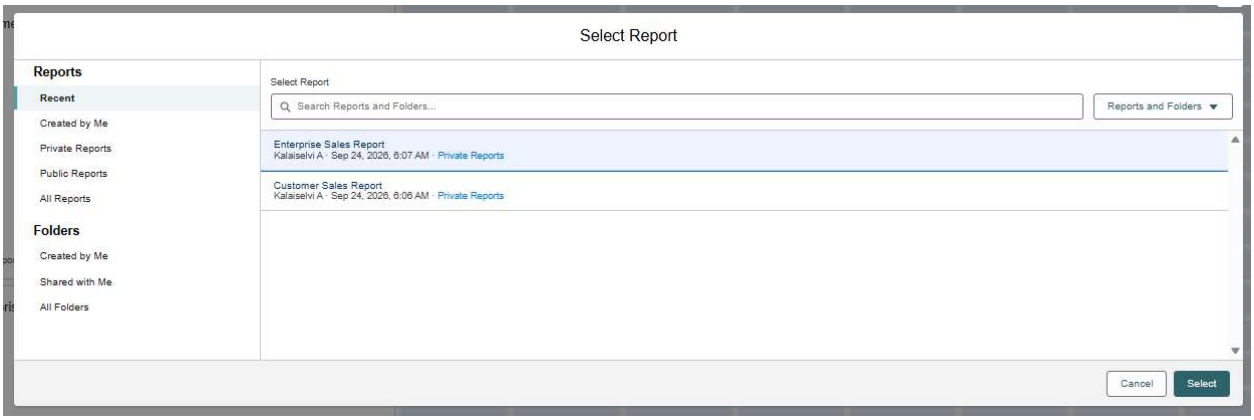

3. Name : Customer Vs Enterprise Sales
4. Click Create.

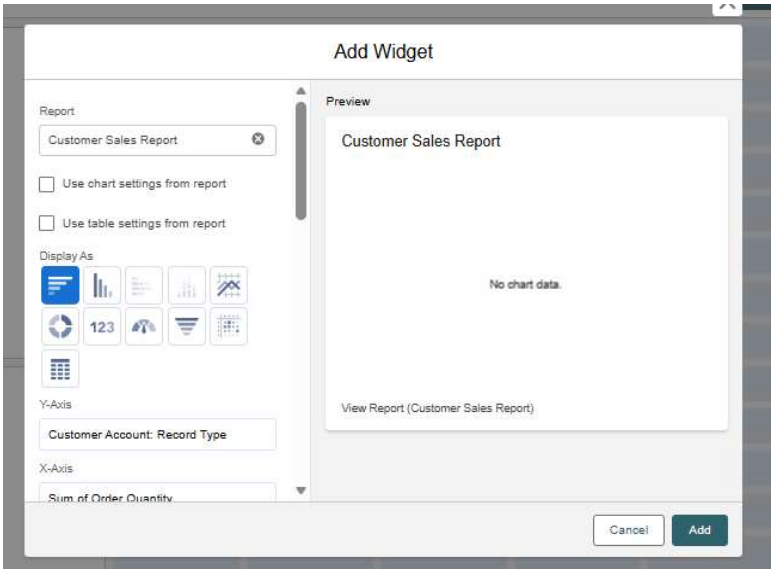

5. Click Widget
6. Select Chart or Table.

7. Select Customer Account Sales Report

8. Display As : Select the one which you feel comfortable with.
9. Click **Add**.

10. Repeat the same steps for the Enterprise Account Sales Report.
11. Click **Save**.

Milestone 12 – Conclusion

In conclusion, the development of TheChaiShop&Co CRM application improves customer and business data management. It helps organize employer, customer, and enterprise information in a centralized system. Automated sales calculations reduce manual errors and save time. Email notifications also improve customer communication and engagement. Overall, the application helps streamline business operations and supports better decision-making.

7. FUNCTIONAL & PERFORMANCE TESTING

During the testing phase, the Salesforce Lightning interface was tested to verify the proper functioning of the application. The following features were tested:

- Record creation for Employer, Customer, and Enterprise objects
- Validation rules for Aadhar, PAN, and phone numbers
- Record types and page layouts
- Formula fields for order quantity and billing
- Flow execution for birthday email notifications
- Reports and dashboard generation

Performance testing was also carried out to ensure quick response and stable system operation.

8. ADVANTAGES & DISADVANTAGES

Advantages

- Centralized data management
- Reduced manual work
- Improved data accuracy
- Automated calculations and notifications
- Easy access to reports and dashboards

Disadvantages

- Requires a Salesforce license
- Depends on internet connectivity
- Limited offline access

9. CONCLUSION

The CRM Application for TheChaiShop&Co improves business operations by organizing customer data, automating billing, and providing useful reports. The system reduces manual errors, saves time, and improves customer management through automation and analytics.

10. FUTURE SCOPE

- **M**obile CRM integration
- AI-based sales forecasting
- WhatsApp and SMS notifications
- Inventory management
- Multi-branch support
- Advanced customer profiling
